Enterprise Architecture - the path to Government Transformation

Presenter:

Dr. Peter Aiken Associate Professor Department of Information Systems/VCU peter @datablueprint.com President: DAMA-International http://dama.org

Host:

Eric Sweden Program Director, Enterprise Architecture & Governance NASCIO

Enterprise Architecture - the path to Government Transformation

UNLOCKING BUSINESS VALUE

The Changing Roles of the Chief Architect and the CIO

Chief Architect becomes CDO and CIO keeps doing what they have been doing – together they are a stronger team ...

datablueprint.com

Peter Aiken, PhD

- 30 years of experience in data management
 - Multiple international awards
 - Founder, Data Blueprint (http://datablueprint.com)
- 9 books and dozens of articles
- Experienced w/ 500+ data management practices in 20 countries
- Multi-year immersions with organizations as diverse as the US DoD, Deutsche Bank, Nokia, Wells Fargo, and the Commonwealth of Virginia

The Case for the Chief Data Officer

Recasting the C-Suite to Leverage Your Most Valuable Asset

The Changing Roles of the Chief Architect and the ClO

- A bit of history
 - Clinger Cohen Act how's it going?
- Motivations:

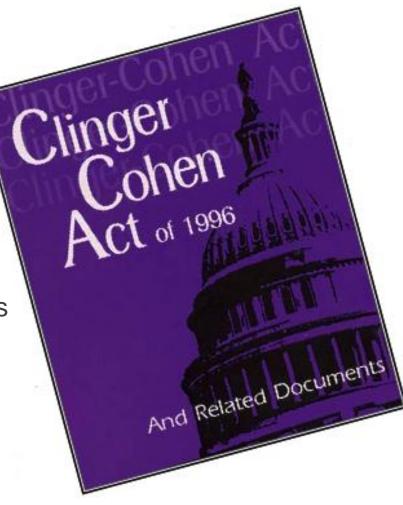

- Poor data management performance to date
 - (requires additional or difference effort)
- Recognition that data is not a project
 - (requires a difference approach)
- Lack of domain expertise
 - (requires different career preparation)
- The role of a CDO three necessary but insufficient prerequisites:
 - 1. Dedicated solely to data asset leveraging
 - 2. Unconstrained by an IT project mindset
 - 3. Reporting directly to the business

"Most significant IT reform of the last decade"

1996 (passed)

- Establish Agency CIOs
 - Link IT investments to accomplishments
- Requires
 - CIO "Milestone Decision" assessment
 - Establish process to select, manage and control IT investments (CMM Level 2)
- Responsible
 - "developing, maintaining, and facilitating the implementation of a sound and integrated information technology architecture"

The Clinger-Cohen Act: 10 Years Later

By Wes Andrues | July 11, 2006 | 0 Comments

Ten years ago, Congress passed the Information Technology Management Reform Act, later renamed for its co-sponsors, Rep. William Clinger, R-Pa., and Sen. William Cohen, R-Maine. The Clinger-Cohen Act fundamentally changed federal procurement of information technology, requiring that IT purchases be handled as capital investments and that chief information officers be appointed to lead the process of planning, acquiring and managing technology. In this four-part series running over a month's time, retired Air Force Lt. Col. Wes Andrues, an IT policy consultant and CIO Certificate holder from the National Defense University, looks at the changes in the technology acquisition landscape in the years since the law was passed.

2006 (assessed)

- Mixed results
 - Federal Enterprise
 Architecture

- Some guidance exists
- Some experiences gained
- Some progress has been made
- "The landscape of federal information technology is not a clearly defined plain of reference points that can be empirically studied in pure isolation"
- Planned 5% decrease in IT costs
- 9% increase instead

http://www.govexec.com/federal-news/2006/07/the-clinger-cohen-act-10-years-later/22227/

The Changing Roles of the Chief Architect and the ClO

 - Clinger Cohen Act how's it going?
- Motivations:

- Poor data management performance to date
 - (requires additional or difference effort)
- Recognition that data is not a project
 - (requires a difference approach)
- Lack of domain expertise
 - (requires different career preparation)
- The role of a CDO three necessary but insufficient prerequisites:
 - 1. Dedicated solely to data asset leveraging
 - 2. Unconstrained by an IT project mindset
 - 3. Reporting directly to the business

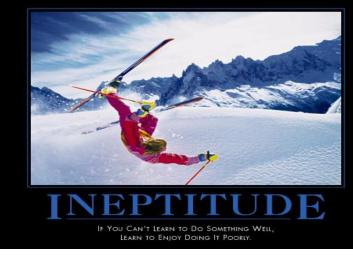

IT Project Failure Rates

Recent IT project failure rates statistics can be summarized as follows:

- Carr 1994
 - 16% of IT Projects completed on time, within budget, with full functionality
- OASIG Study (1995)
 - 7 out of 10 IT projects "fail" in some respect
- The Chaos Report (1995)
 - 75% blew their schedules by 30% or more
 - 31% of projects will be canceled before they ever get completed
 - 53% of projects will cost over 189% of their original estimates
 - 16% for projects are completed on-time and on-budget
- KPMG Canada Survey (1997)
 - 61% of IT projects were deemed to have failed
- Conference Board Survey (2001)
 - Only 1 in 3 large IT project customers were very "satisfied"
- Robbins-Gioia Survey (2001)
 - 51% of respondents viewed their large IT implementation project as unsuccessful
- MacDonalds Innovate (2002)
 - Automate fast food network from fry temperature to # of burgers sold-\$180M USD write-off
- Ford Everest (2004)
 - Replacing internal purchasing systems-\$200 million over budget
- FBI (2005)
 - Blew \$170M USD on suspected terrorist database-"start over from scratch"

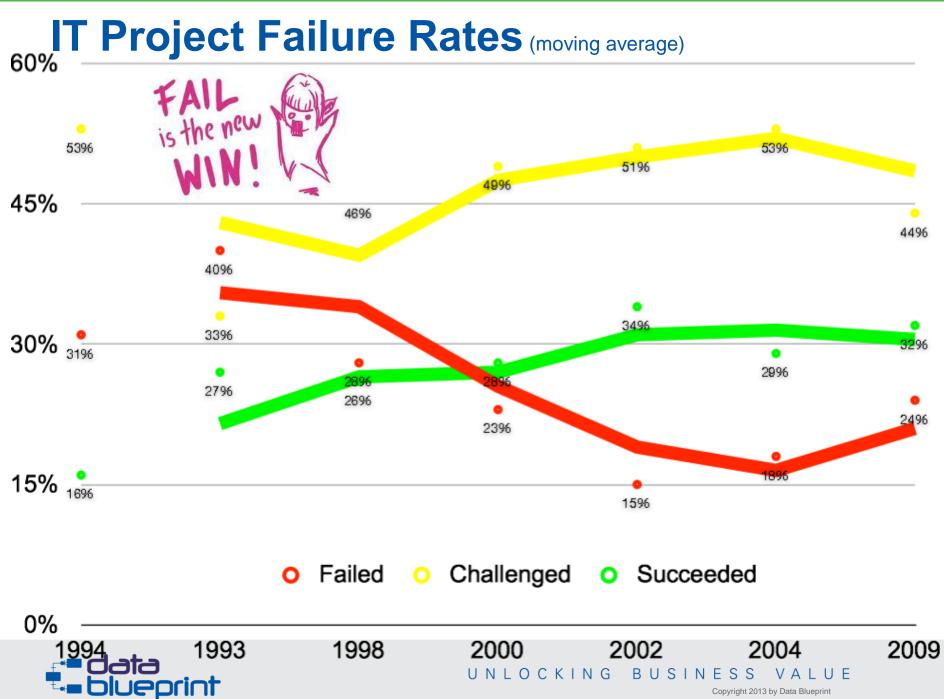

1 in 3 IT projects suffers on

- Price
- Schedule
- Functionality

Why ETL and Data Migration Projects Fail

Joseph R. Hudicka Information Architecture Team

- Assessed 1200 migration projects!
 - Surveyed only experienced migration specialists who have done at least four migration projects
- The median project costs over 10 times the amount planned!
 - Biggest Challenges: Bad Data; Missing Data; Duplicate Data
- The survey did not consider projects that were cancelled largely due to data migration difficulties
- "... problems are encountered rather than discovered"

\$0 \$125,000 \$250,000 \$375,000 \$500,000 Median Project Expense Median Project Cost

The Changing Roles of the Chief Architect and the ClO

- A bit of history
 - Clinger Cohen Act how's it going?
- Motivations:

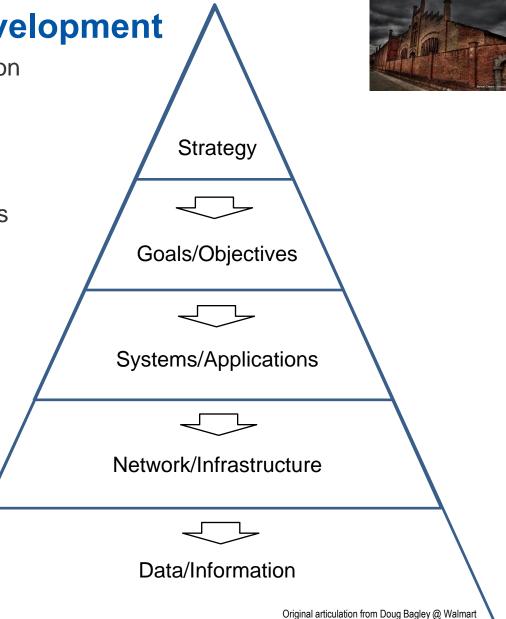

- Poor data management performance to date
 - (requires additional or difference effort)
- Recognition that data is not a project
 - (requires a difference approach)
- Lack of domain expertise
 - (requires different career preparation)
- The role of a CDO three necessary but insufficient prerequisites:
 - 1. Dedicated solely to data asset leveraging
 - 2. Unconstrained by an IT project mindset
 - 3. Reporting directly to the business

Application-Centric Development

- In support of strategy, the organization develops specific goals/objectives
- The goals/objectives drive the development of specific systems/applications
- Development of systems/applications leads to network/infrastructure requirements
- Data/information are typically considered after the systems/applications and network/ infrastructure have been articulated
- Problems with this approach:
- Ensures that data is formed around the application and not the information requirements
- Process are narrowly formed around applications
- Very little data reuse is possible

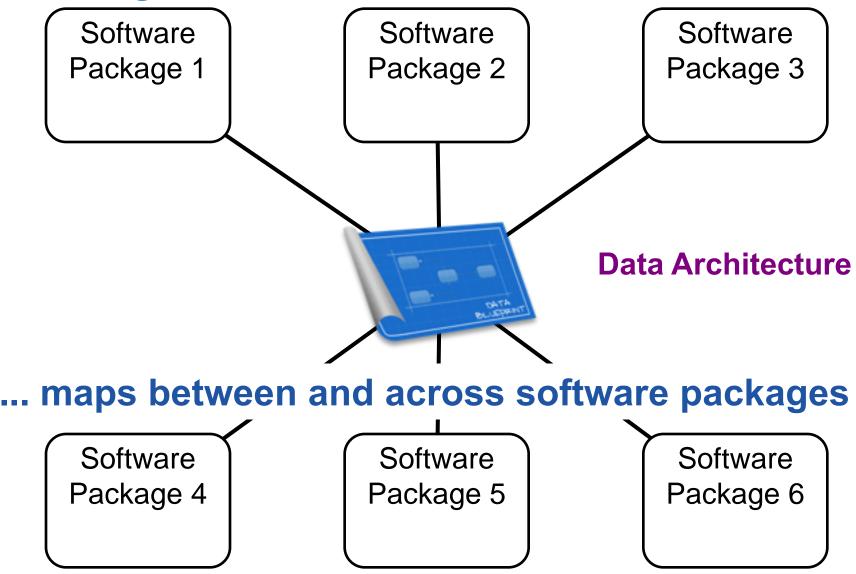

"The significant problems we face cannot be solved at the same level of thinking we were at when we created them."

- Albert Einstein

An organization's data architecture ...

data

What does it mean to treat data as an organizational asset?

- Assets are economic resources
 - Must own or control
 - Must use to produce value
 - Value can be converted into cash
- An asset is a resource controlled by the organization as a result of past events or transactions and from which future economic benefits are expected to flow to the organization [Wikipedia]
- With assets:
 - Formalize the care and feeding of data
 - Cash management HR planning
 - Put data to work in unique and significant ways
 - Identify data the organization will need [Redman 2008]

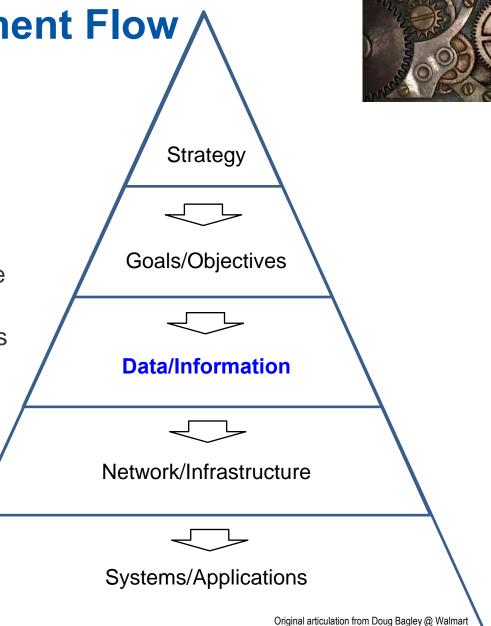

Data-Centric Development Flow

- In support of strategy, the organization develops specific goals/objectives
- The goals/objectives drive the development of specific data/information assets with an eye to organization-wide usage
- Network/infrastructure components are developed to support organization-wide use of data
- Development of systems/applications is derived from the data/network architecture
- Advantages of this approach:
- Data/information assets are developed from an organization-wide perspective
- Systems support organizational data needs and compliment organizational process flows
- Maximum data/information reuse

UNLOCKING BUSINESS VALUE

Designing for Evolution is Different than Creating New Systems

Common Organizational Data (and corresponding data needs requirements)

Evolve (Version +1) Data evolution is separate from and external to the system development life cycle! Systems Development **Activities** Create New Organizational Capabilities

- 2. Unconstrained by an IT project mindset
- 3. Reporting directly to the business

UNLOCKING BUSINESS VALUE

The "Chief Officer" Title

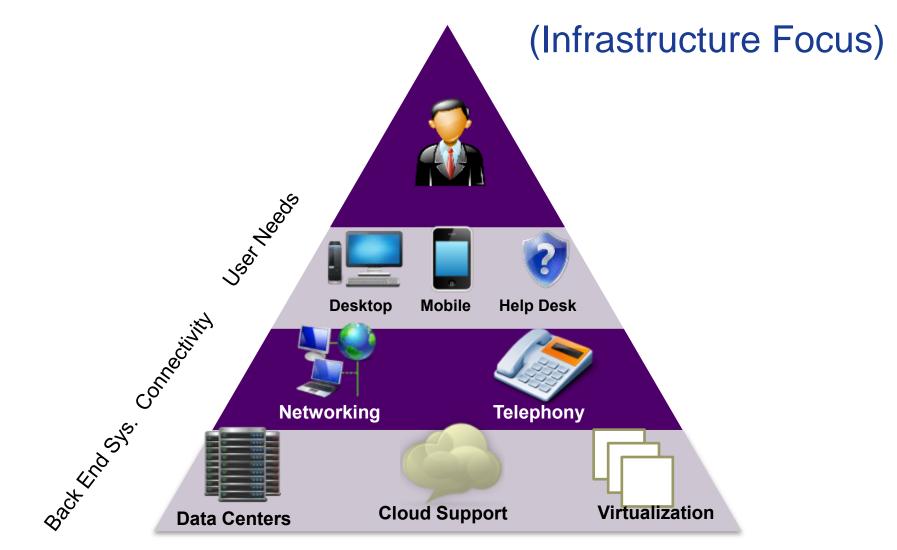

Chief

- The head or leader of an organized body of people; the person highest in authority: the chief of police
- Chief Financial Officer (CFO)
 - Individual possessing the knowledge, skills, and abilities to be both the final authority and decision-maker in organizational financial matters
- Chief Risk Officer (CRO)
 - Individual possessing the knowledge, skills, and abilities makes decisions and implements risk management
- Chief Medical Officer (CMO)
 - Responsible for organizational medical matters. The organization, and the public, has similar expectations for any of chief officer – especially after the Sarbanes-Oxley bill.

CIO Taskings

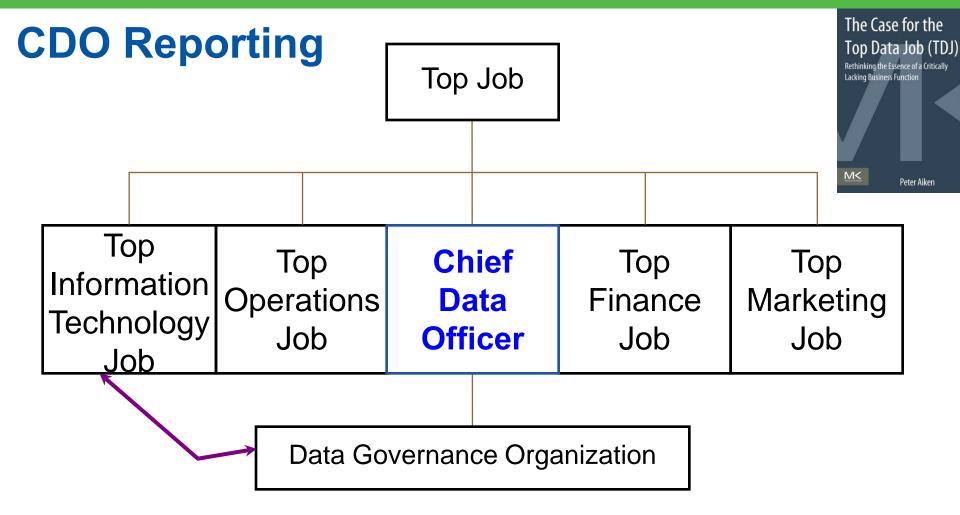

- The Top Job
 - Finance
 - Operations
 - Sale/Marketing
 - **H**R
 - Information? Risk
 - Technology/CIO
 - Align IT initiatives with business goals
 - Improving IT operations performance •
 - Cultivating the IT/business partnership ٠
 - Cost control/expense management
 - Implementing new systems
 - Leading change efforts
 - Driving business innovation
 - Redesigning business processes
 - Developing and refining business strategy
 - Negotiating with IT vendors
 - Managing IT crises
 - Developing market strategies & technologies
 - Security management
 - Studying trends to identify opportunities

Where does data go?

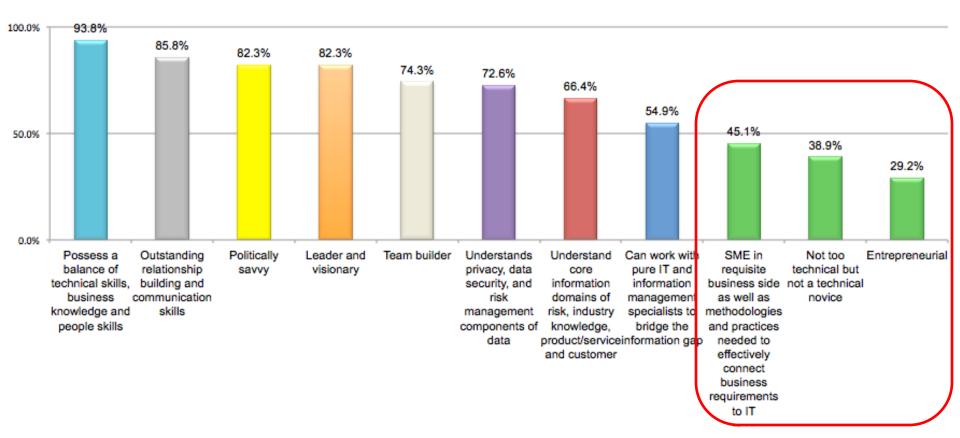

- There is enough work to justify the function
- There is not much talent
- The CDO provides significant input to the Top Information Technology Job

What key traits are necessary to be a successful CDO?
