PROFILES OF PROGRESS 3

State Health IT Initiatives

April 2009

INTRODUCTION

If there really is a season for everything, then this is the season for health IT. In the span of just a few years, issues surrounding health information technology have gone from being relatively obscure to being topics of mainstream conversation. In 2008, both presidential campaigns advocated for the increase of technology in healthcare, citing improved patient care, efficiency and cost reduction as their reasoning.

And in 2009, we are at an unprecedented point in the history of health IT. This compendium, now in its third installment, outlines where state health IT initiatives currently stand, and features the role of the state CIO in these efforts. It examines only those entities that are state-led, or designated by the state, to work toward statewide health information exchange. This compendium has changed substantially since its first installment in 2006, and each featured initiative stands poised to accelerate.

Stakeholders across the healthcare IT arena are standing at a precarious tipping point in which billions of dollars have been granted toward making widespread health information exchange a reality. These billions of dollars came in the form of a massive economic stimulus bill, the American Recovery and Reinvestment Act (ARRA), signed by President Obama to re-vamp a struggling American economy by pouring funding into thousands of projects, including approximately \$30 billion for health IT efforts. The efforts outlined in this report are likely to change drastically in the near future, due to this influx of dollars.

The funding designated for health IT will come in two forms. The first includes money allocated for incorporating health IT aspects into Medicaid and Medicare—in several states, this will build on the work already enabled by CMS' Medicaid Transformation Grants. The second will come in the form of grants distributed to statewide health information exchange efforts. Governors are charged with designating an entity within their state to receive this money—only state-designated entities with an

established plan, or one already capable of exchanging health information, will be eligible to receive these dollars.

This is widely acknowledged as a once-in-a-lifetime opportunity to take the training wheels off maturing health information exchange initiatives, invest in them and help make them sustainable. And, an opportunity to put much-needed dollars toward stressed Medicaid and Medicare programs and to modernize the way these systems deliver services and payments to physicians. The ARRA has brought, simultaneously, a mandate to act effectively and an urgency to act now.

State CIOs know a lot about the urgency of now. Juggling a wide array of projects within the state enterprise, where everything takes precedence and everything is a priority, state CIOs know about the pressure to carry out mandates that carry a hefty price tag. They know about beginning projects that sometimes have more questions than answers.

Many questions surround the health IT aspects of the ARRA. New provisions were set forward in the legislation around HIPAA privacy laws, new provisions surrounding security breach notifications, along with several requirements for the utilization of the grant dollars that still need to be fully defined by the federal government. Answers are in the process of being fleshed out by the healthcare community, and collaboration across the local, state and federal levels of government is occurring on a wide scale.

There is an acknowledged camaraderie among those advocating for the advancement of health IT; and a recognized awareness that continuing to develop siloed systems simply can not work for the long term. An acknowledgement that widespread health information exchange is going to require that all stakeholders—providers, payers, government, and most importantly, patients—have a seat at the ever growing table.

INTRODUCTION

State CIOs must also have a seat at this table. As health IT money begins to flow into states and Governors work to designate which state entities will be responsible for utilizing these dollars, state CIOs have the capability to engage IT stakeholders across the enterprise. By acting as a convener of state IT resources, the benefit for collaboration and engagement among state officials that lends to long-term sustainability of projects can be realized.

The nation's largest associations of elected officials, the National Governors Association and the National Conference of State Legislatures, have long-term and large-scale operations in place to monitor and advance the state and the role of the state official in health IT and health information exchange. In 2008, the NGA released the results of a study, "Public Governance Models for a Sustainable Health Information Exchange Industry" which examined governance models for state health information exchanges. 1

This extensive study indicated a broad need for not only state engagement in the development of health information exchange, but also the importance in having state leaders involved, including the state CIO. State CIOs already involved in their states' health IT efforts know the importance of this as well. They understand that health IT initiatives can potentially improve healthcare quality and recognize these measures as a means to reduce costs for state budgets that are desperately in need of cost savings across the board.

Implementing healthcare information exchange, at any level of government, can be a daunting task coupled with an aggressive timeline and many challenges faced in its execution. However, with digital infrastructure increasingly becoming part of the fabric of government, incorporating technology in healthcare is inevitable. What was once contained to certain pockets across the country is poised to become a reality for all states.

The ARRA guarantees that these initiatives will change rapidly as money begins to potentially flow into these efforts. But for now, this compendium serves as a snapshot in time, in which state health IT initiatives stand balanced on the brink of an unprecedented opportunity in history. It's an exciting time for health IT—and state CIOs and technology leaders hold the knowledge and tools to help make secure and interoperable state health information exchange happen.

¹ National Governors Association < <u>www.nga.org</u> > September 2008.

ACKNOWLEDGEMENTS

NASCIO would like to express its thanks and gratitude to the members of the **2009 Health IT Working Group and its Chair, Otto Doll, CIO, South Dakota**, for lending their time and expertise to help guide this product's development.

Bryan Dreiling, State of Kansas Adel Ebeid, State of New Jersey Sharon Fahy, Ingenix Scott Fairholm, Commonwealth of Pennsylvania Viann Hardy, Maximus Rick Howard, State of Oregon Candy Irven, NIC Linda Kluwe, State of Minnesota Harold Kocken, BearingPoint Michael Locatis, State of Colorado John Marcellus, State of Oklahoma Denny McGuire, State of North Carolina Kristina Mulholland, Input Bruno Nardone, IBM Holli Ploog, Unisys Mike Quinnelly, Oracle Christy Quinlan, State of California Bob von Wolffradt, State of Wyoming

NASCIO would also like to thank Stephanie Jamison, NASCIO Issues Coordinator, for her work as lead NASCIO staff on this project as well as Doug Robinson, NASCIO Executive Director and Chris Walls, AMR Senior Website & Publications Coordinator, for their guidance and creative services regarding this publication.

Finally, NASCIO extends a special thanks to those state CIOs and their staff who contributed in the development and revision of this product.

Please direct any updates, questions or comments about this compendium or any of NASCIO's Health Information Technology research products to Stephanie Jamison at sjamison@amrms.com or (859) 514.9148.

Founded in 1969, the National Association of State Chief Information Officers (NASCIO) represents state chief information officers and information technology executives from the states, territories, and the District of Columbia. The primary state government members are senior officials who have executive level and statewide responsibility for information technology leadership. State officials who are involved in agency level information technology management may participate as associate members. Representatives from other public sector and non-profit organizations may also participate as associate members. Private sector firms may join as corporate members and participate in the Corporate Leadership Council.

AMR Management Services provides NASCIO's executive staff.

ALABAMA

Governor's Executive Task Force to Strengthen Alabama Families

Group Website: www.strengthenfamilies.alabama.gov

Source of Authority: Governor

Source Document: www.strengthenfamilies.alabama.gov

State Government Involvement: A number of state agencies are represented on this Task Force. Sixteen state department directors are executive members and the Task Force is staffed by members of the Governor's office.

State CIO Involvement: The state CIO is an executive member of the Governor's Task Force to Strengthen Alabama Families and is currently providing IT & PM staff support for the Camellia Project and other e-health initiatives. The state CIO is directly involved with the creation and direction of the Health and Human Services Framework for Alabama.

Major Initiatives: This Task Force is working to examine issues and make recommendations on improving ehealth efforts throughout the state. Under the direction of the Governor, Alabama has embarked on the task of transforming the management and delivery of the state's health and human services. In January 2008, Governor Riley launched the Connected Health and Human Services Framework (CHHSF) as the cornerstone of an effort to implement a state-wide Health and Human Services (HHS) strategy that is highly integrated and family centered. As part of this initiative, Alabama has committed to materially increasing health and human service outcomes for children and families as measured by a dramatic increase in the state's national ranking in child and family indicators. Interaction with the following agencies will ensure the success we are looking for.

- Department of Human Resources
- Medicaid Agency
- Department of Public Health
- Mental Health and Mental Retardation
- Department for Rehabilitation Services
- Department of Senior Services

Phase one of this endeavor has been completed and can be reviewed at www.camellia.alabama.gov. This phase is the "Benefits and Services Form," also known as the "Camellia Eligibility Screening Tool."

Phase Two of the Camellia Project is now underway. This phase of the project (ESB – Enterprise Services Bus & CCI – Common Client Index) will be implemented over a 3 year period. **Year one** will include the establishment of the CHHSF and provision of early wins for the entire effort. **Year two** objective is to use the CHHSF to streamline and improve the performance of the current processes and functions. **Year three** objectives are to consider new and innovative ways of using technology to transform current processes and practices. The implementation of these programs will place Alabama in the forefront of a national trend to improve its health and human services programs (HHS).

Last Updated: 03.24.09

ALASKA

Alaska ChartLink

Group Website: www.alaskachartlink.org

Governance: 10-member Steering Committee

Source of Authority: Non-profit

State Government Involvement: Alaska ChartLink was formed in January of 2006 by the Alaska Telehealth Advisory Council (ATAC). ATAC is under the jurisdiction of the Alaska Health and Social Services Department (H&SS) and is co-chaired by the Commissioner of the Department of H&SS.

Alaska ChartLink, formerly known as Alaska RHIO, secured a Health Information Security and Privacy Collaboration (HISPC) grant the support of the Governor's office. The Director of the Alaska State Public Health Department also sits on the Steering Committee.

State CIO Involvement: The state CIO has not been directly involved in this initiative to date.

Major Initiatives: The Alaska ChartLink seeks to provide widespread access to a statewide health information data exchange system that improves quality, safety, outcomes and efficiency in healthcare by making vital data available to providers, payers, and patients when and where they need it.

Alaska ChartLink is working to exchange health information securely and timely while still protecting privacy. In an effort to facilitate electronic health record implementation throughout the state, the Alaska RHIO also works in close partnership with the Alaska EHR Alliance, the Alaska Primary Care Association, Mountain Pacific Quality Health and other organizations throughout the state. These organizations provide planning, implementation and support of electronic health records in physician practices and community health centers.

ARIZONA

Arizona Health-e Connection

Group Website: www.azhec.org

Governance: Seven permanent Directors on the Board and fifteen Designated Directors

Source of Authority: Non-profit

Source Document: www.azhec.org/documents/Executive%20Order.pdf

State Government Involvement: Prior to its non-profit status, the Arizona Health-e Connection (AzHeC) was created by Executive Order. In addition, there are several members of state government and the Governor's office on the Board of Directors and Executive Committee.

State CIO Involvement: The state CIO serves as Vice-Chair of the Executive Committee.

Major Initiatives: Arizona is considered a national leader in the state health information technology movement. While AzHeC began as a state-led program called upon by the Governor to comprehensively review issues and develop recommendations, this collaborative has evolved into a private-public partnership to refine those recommendations and facilitate implementation.

Arizona Health-e Connection is neither a regional health information organization (RHIO) nor an information exchange, but instead has a strategic direction to support the establishment of successful Health Information Infrastructure in Arizona through activities in the following three areas:

- Serving as an educator and statewide clearinghouse for information
- Researching and developing statewide policies, and model legal agreements
- Supporting health information exchange and provider adoption of health information technology

AzHeC involved with other statewide health IT efforts underway including efforts undertaken by the Arizona Government Information Technology Agency (GITA):

Arizona Health Privacy Project: Funded by the Health Information Security and Privacy Collaboration (HISPC) project which was established and funded by the Agency for Healthcare Research and Quality in 2006. Arizona's GITA received \$350,000 in 2006 to participate in the HISPC - Arizona Health Privacy Project. In 2008, an additional \$414,000 was awarded to the agency to participate on a multi-state collaborative to address standards for health information exchange.

RHITA: GITA manages the Rural Health Information Technology Adoption (RHITA) grant program to support the implementation of healthcare information technology and healthcare information exchange among rural healthcare providers. The current RHITA Program promotes the development of effective and secure Health Information Exchange (HIE) among medical providers serving rural Arizona.

AHCCCS HIEHR Utility: AHCCCS, Arizona's Medicaid agency, was awarded a Medicaid Transformation Grant from the Centers for Medicare and Medicaid Services (CMS) on January 25, 2007 to develop and implement a web-based health information exchange (HIE) utility to give all Medicaid providers instant access to patient's health records at the point of service. The Federal funds are being used to support the planning, design, development, testing, implementation and evaluation of the AHCCCS Health Information Exchange and Electronic Health Record (HIEHR) Utility.

ARIZONA

Arizona EHR CPP: In collaboration with Arizona's provider organizations and the Arizona Health-e-Connection, the Arizona Health Care Cost Containment System (AHCCCS) is leading the creation of the Arizona Electronic Health Record (EHR) Collaborative Purchasing Program (CPP). Slated for an early 2009 launch, the first phase of the CPP is designed to help primary care providers in small- and medium-sized practices with the transition to an affordable, user friendly EHR system. Targeted dental, behavioral health and long term care software applications are identified for subsequent phases. The initial offering of the program will include a discounted subscription to a certified, web-based EHR and associated services and support.

ARKANSAS

Arkansas Telehealth Oversight and Management (ATOM)

Group Website: www.arktelehealth.org

Governance: Five-member Board of Directors, including the Department of Health, and twelve-member Advisory Committee

Source of Authority: Public-private partnership

Source Document: None currently available

State Government Involvement: State government members include the Arkansas Center for Health Improvement, Arkansas Department of Health, Arkansas Department of Human Services, Arkansas Foundation for Medical Care, Arkansas Department of Information Systems, Arkansas Research & Education Optical Network, and the University of Arkansas for Medical Science.

State CIO Involvement: The state CIO's office provides staff support for this initiative.

Major Initiatives: In February of 2009, ATOM was requested by the Arkansas Broadband Advisory Committee to draft telemedicine recommendations for the Governor in order to be prepared for economic stimulus funds coming directly to state government for allocation. This report can be viewed here: www.arktelehealth.org/ArkTelehealth/Downloads/Downloads.html

Also in February, ATOM prepared a sustainability plan for the operations of a statewide network that identified future funding sources and outlined the success factors achieved thus far. This plan can be viewed here: www.arktelehealth.org/ArkTelehealth/Downloads/Downloads.html

The ATOM is a strategic partnership of health and information technology organizations dedicated to establishing and managing a single, unified statewide telehealth network linking all medical resources in the state. In order to communicate with their many stakeholders, they have created a <u>blog</u> to convey updated news and achievements.

ATOM has also established relationships with other organizations working to increase the availability of broadband throughout Arkansas—these include the Arkansas Broadband Advisory Council and Connect Arkansas. In addition, the ATOM Board Chairman also serves as a member on the Arkansas Cyberinfrastructure Steering Committee and Advisory Committee.

CALIFORNIA

California Health and Human Services Agency

Group Website: www.chhs.ca.gov/initiatives/HealthInfoEx/Pages/Default.aspx

Source of Authority: State Agency

Source Document: www.ohi.ca.gov/calohi/Home/AboutCalOHII/tabid/58/Default.aspx

State Government Involvement: The California Health and Human Services Agency serves as the lead agency on HIE and HIT issues for the State.

State CIO Involvement: CHHSA works with the State Chief Information Officer (CIO), the Department of Managed Care and the Business, Transportation and Housing Agency to oversee the State's HIE and HIT related efforts.

Major Initiatives: Two major initiatives in California around health IT include:

Health Information Technology Financing Advisory Commission

The purpose of this Commission is to determine the extent to which access to capital impedes the implementation of Health Information Technology in various health care sectors; if impediments exist, determine whether the state should be involved in addressing these impediments, and suggest how that involvement might be most effectively implemented.

The HIT Financing Advisory Commission released its report in December 2008.

California Privacy and Security Advisory Board

Privacy and security of health information is a cornerstone to the success of the electronic exchange of health information. The Privacy and Security Advisory Board (PSAB) is the arena where the interactions of the law, privacy, security and the education of consumers and providers can be strategically explored and addressed. The goal is to work though the business variations and legal impediments found within California so that we can be in a position to pilot the exchange of electronic health information with other states.

In addition, effective August 1, 2008, the California Office of HIPAA Implementation (CalOHI) changed its name to the Office of Health Information Integrity (CalOHII). This change was made to reflect the Office's expanding new role supporting the Health and Human Services Agency's health information exchange (HIE) initiatives.

CalOHII is now working with a wide spectrum of healthcare stakeholders including representatives from the healthcare industry, consumers, and privacy and security advocates to develop new privacy and security standards to enable the adoption and application of health information exchange in California. In addition, CalOHII is working on a number of items on the administration health information technology agenda including the expansion of broadband throughout California, the implementation of telehealth, and support to the Health Information Technology Financing study. Many of the activities that support these projects involve other state and government partners and are well beyond the original scope of the CalOHI.

CALIFORNIA

Additionally, the California Health Information Identification (CHILI) search tool is now live. CHILI assists in identifying California statutes and regulations related to the privacy, access, and security of individually identifiable health information. CHILI also identifies analogous federal provisions present in the Health Insurance Portability and Accounting Act (HIPAA). www.ohi.ca.gov/chili/index.php

COLORADO

Colorado Regional Health Information Organization (CORHIO)

Group Website: www.corhio.org

Governance: 20-member Board of Directors

Source of Authority: Non-profit

Source Document: www.corhio.org/About/About.htm

State Government Involvement: The State of Colorado serves as a financial partner for CORHIO and several state government agencies have representatives on the Board.

State CIO Involvement: The CIO is an ex-officio member of the CORHIO Board.

Major Initiatives: In December of 2008, a statewide health information exchange initiative went live in Colorado. An effort that is estimated to benefit more than 1 million Coloradans, this initiative was a key component of Governor Ritter's ambitious "Building Blocks to Healthcare Reform" plan launched in February of 2008.

Currently, 500 emergency clinicians are being trained to use the system which shares information across emergency departments at The Children's Hospital, Denver Health and Hospital Authority, and University of Colorado Hospital, as well as Kaiser Permanente Colorado. More information about the report can be found here:

www.corhio.org/NewsEvents/2008 12 13 corhio news release final dl pa wa ahrq.pdf

In addition, CORHIO's participation in the federal Health Information Security and Privacy Collaborative (HISPC) funded by the HHS Office of the National Coordinator was extended by the Governor in April of 2008. The third phase of the collaborative includes both (1) improved understanding and technical improvements to the privacy and security of health information exchange through the adoption of standards that are applicable throughout Colorado and beyond and (2) improved ability to engage and educate consumers about health information exchange, particularly regarding privacy and security issues.

During the first phase, Colorado produced a comprehensive report on the variations of business practices and state regulatory climate for privacy and security, relative to health information technology. For the second phase of the collaborative, CORHIO developed privacy and security procedures through a collaborative process with the AHRQ Demonstration partners as well as the Department of Health Care Policy and Financing, the Department of Public Health and Environment, and Exempla Hospital System. These policies were shared with consumer representatives as well.

Last Updated: 03.03.2009

CONNECTICUT

eHealth Connecticut

Group Website: www.ehealthconnecticut.org

Governance: 28-member Board of Directors

Source of Authority: Non-profit

Source Document: www.saintfrancisdoctors.com/ehealthconnecticut/documents

State Government Involvement: The Governor helped launch this program and representatives from the state Department of Social Services and Department of Public Health, as well as the Lieutenant Governor, provide direction as ex-officio board members.

State CIO Involvement: No state CIO involvement was detected by NASCIO staff.

Major Initiatives: In September of 2008, then-HHS Secretary Mike Leavitt announced that eHealth Connecticut was selected to join fourteen community collaborations as Chartered Value Exchanges (CVEs) — local collaborations of health care providers, employers, insurers, and consumers working jointly to improve care and make quality and price information widely available.

As Chartered Value Exchanges, these communities will have access to information from Medicare that gauges the quality of care that physicians provide to patients. These performance measurement results may be combined with similar private-sector data to produce a more comprehensive guide to the quality of care in these communities. In addition, these communities will join a nationwide Learning Network sponsored by the HHS Agency for Healthcare Research and Quality. This network will provide peer-to-peer learning experiences and technical assistance opportunities through facilitated meetings face-to-face and on the Web.

Last Updated: 03.03.2009

DELAWARE

Delaware Health Information Network (DHIN)

Group Website: www.dhin.org

Governance: 17-member Board of Directors

Source of Authority: Legislation

Source Document: http://dhcc.delaware.gov/information/dhin.shtml

State Government Involvement: Several board members for DHIN are representatives of state government. This is considered to be a partnership between the state and healthcare providers which includes the state, healthcare providers, and other interested parties (such as the Medical Society of Delaware, employers, insurers, etc). Other state government representatives serve on DHIN Committees.

State CIO Involvement: The state CIO is on the DHIN Board of Directors.

Major Initiatives: In October of 2007, DHIN was one of the nine initial health information exchanges (HIEs) selected to participate in the U.S. Department of Health and Human Services' National Health Information Network Trial Implementations. Since that time, DHIN and its partner Medicity, Inc. have played an active leadership role in collaborating with other NHIN contract recipients across the nation to help create a working national health information network infrastructure.

Created in 1997 by the General Assembly, DHIN is a fully operational state-wide health information exchange and is considered to be the first statewide exchange in the nation. DHIN is a collaboration of physicians, hospitals, commercial laboratories, community organizations and patients, designed to provide for the secure, fast and reliable exchange of health information among the many medical providers treating patients in the State. DHIN provides one source and one format for all clinical results.

Last Updated: 03.03.2009

FLORIDA

Florida Health Information Network (FHIN)

Group Website: www.fhin.net/FHIN/workgroups/HIECC.shtml

Governance: 14-member Coordinating Committee

Source of Authority: Agency for Health Care Administration

Source Document: www.fhin.net/FHIN/workgroups/HIECCmission112607.pdf

State Government Involvement: The Health Information Exchange Coordinating Committee was organized by the Florida Agency for Health Care Administration during the fall of 2007 to advise and support the Agency in developing and implementing a strategy to establish a privacy-protected, secure, and integrated statewide network for the exchange of electronic health records among authorized physicians.

State CIO Involvement: The state CIO has been involved with the Florida Health Information Network since its beginning. Input from the state CIO is welcomed for both policy creation and in reviewing technical and security models of the proposed network

Major Initiatives: The Health Information Exchange Coordinating Committee advises and supports the Agency for Health Care Administration to develop and implement a strategy for establishing a privacy-protected, secure, and integrated statewide network for the communication of electronic health records among authorized parties. The Committee functions as an issue-oriented technical workgroup of the State Consumer Health Information and Policy Advisory Council.

- 1) In 2008, the HIE Coordinating Committee endorsed the Personal Health Record website for disaster preparedness developed by the Agency.
- 2) In 2008, the HIE Coordinating Committee awarded a Point of Care Grant to the Miami-Dade County Health Department to install Electronic Health Record software in two free clinics in Miami.
- 3) In 2009, the HIE Coordinating Committee approved the launch of a Medicaid health information exchange in a public-private partnership between the Agency and Availity, LLC. Availity will integrate Florida Medicaid, Blue Cross Blue Shield of Florida and Humana claims data into a claims-based electronic health record and offer it at no charge to all Medicaid providers in the state. Future plans are to include lab results, immunization data and discharge data on the uninsured.
- 4) In 2009, the HIE Coordinating Committee endorsed a \$1 million Rural Infrastructure Grant to leverage the construction of a broadband network among ten rural health care facilities as part of the FCC Rural Health Care Pilot Project.

GEORGIA

Georgia Health Information Technology and Transparency (HITT) Advisory Board

Group Website: http://dch.georgia.gov/00/channel_title

Governance: 10 Advisory Board members

Source of Authority: Executive Order

Source Document:

http://dch.georgia.gov/vgn/images/portal/cit 1210/42/50/70384567HITT Executive Order.pdf

State Government Involvement: The HITT Advisory Board members advise the Georgia Department of Community Health (DCH). Additionally, the Office of Health Information Technology and Transparency is housed within Georgia's Department of Community Health and has responsibility to support the HITT Advisory Board.

State CIO Involvement: The Georgia Technology Authority is an ad-hoc member of the HITT board; the State CTO represents GTA at those meetings.

Major Initiatives: In February of 2008, the HITT Advisory Board adopted its Health Information Technology and Transparency (HITT) Strategic Plan that was prepared by the Office of HITT outlining achievement and identifying future objectives. Among the achievements included several meetings convening stakeholders, and several grants were awarded to healthcare facilities to implement various aspects of health IT including electronic health record and e-prescribing development. Other achievements included incorporating health information exchange in Medicaid programs and a contract in place with a vendor to upgrade its existing MMIS system to be compliant with the Medicaid IT Architecture (MITA) principles.

Future objectives are a continued promotion of statewide health information exchange, the creation of a roadmap for HIE that includes public and private sector stakeholders, all citizens of Georgia, health care providers, and public health. Other future efforts include the continuation of the Health Information Transparency Initiative and increased focus on e-prescribing.

Last Updated: 03.31.2009

HAWAII

Hawaii Health Information Corporation (HHIC)

Group Website: www.hhic.org

Governance: 13-member Board of Directors

Source of Authority: Non-profit

Source Document: http://hhic.org/about-hhic.asp

State Government Involvement: A representative of the state Department of Health serves on the Board of Directors.

State CIO Involvement: NASCIO could not detect state CIO involvement

Major Initiatives: HHIC's mission is to collect, analyze and disseminate statewide health information to support efforts to continuously improve the quality and cost-efficiency of Hawaii's health care services.

A private, not-for-profit corporation established in 1994, HHIC maintains one of Hawaii's largest healthcare databases. Services offered through HHIC include reporting, consulting, training and fostering collaboration. Ongoing development efforts are guided by the requirements, needs and requests of Hawaii's healthcare community. Bringing together experts from key areas of the industry, HHIC has available the expertise of health care analysts, registered health information administrators, health information privacy and security experts, medical consultants, health services planners, and database, website and systems specialists.

Through HHIC's comprehensive database and expert analytical capabilities, organizations are provided with information essential to health care quality management, community assessment, planning and policy analysis, and research.

Last Updated: 04.02.2009

IDAHO

Idaho Health Data Exchange (IHDE)

Group Website: www.idahohde.org

Governance: 13-member Board of Directors

Source of Authority: Non-profit

Source Document: www.idahohde.org/about.html

State Government Involvement: The IHDE emerged as a result of the efforts of the Health Quality Planning Commission which was created by the 2006 Legislature. The Commission was charged with promoting improved quality of care and health outcomes through investment in health information technology. A representative of the Director of the Department of Health & Welfare also sits on the Board of Directors.

State CIO Involvement: The State CIO is not involved in this Commission at this time.

Major Initiatives: In 2008, the IHDE selected a vendor and began work to link healthcare stakeholders to form the state's first health information exchange. The IHDE will allow 1,500 physicians, at least 30 hospitals and 10 data centers to share health information electronically. By June 2009, the Idaho HDE hopes to connect 100 physicians, a third hospital and two independent data sources.

The Idaho Health Data Exchange, Inc., a 501(c)(6) non-profit corporation, was established to govern the development and implementation of a health information exchange in Idaho. The Board includes representation from both the public and private sectors, including the health care delivery and financing systems, health care providers, Idaho Employer Coalition and consumers.

Initial funding for the effort was appropriated by Idaho's Legislature and ongoing funding comes from participants in the Exchange.

ILLINOIS

Illinois Health Information Exchange Planning Grants

Group Website: www.hfs.illinois.gov/hie

Governance: 40-member Advisory Committee

Source of Authority: Legislation

Source Document: www.hfs.illinois.gov/assets/hiegrantapp.pdf

State Government Involvement: This program is administered by the Illinois Department of Healthcare and Family Services (HFS). HFS staffs the Illinois Health Information Exchange (HIE) Advisory Committee in cooperation with the Office of the State CIO and the Department of Public Health.

State CIO Involvement: The State CIO is a member of the Advisory Committee.

Major Initiatives: HFS received \$3 million in state funding in February 2009 to provide health information exchange planning grants throughout the state. This is the first investment of state funding to health information exchange efforts and is intended to facilitate the critical planning work necessary to move Illinois forward on meaningful exchange of health information.

Sixteen Medical Trading Areas in Illinois have been identified by data analysis to address localized planning needs and assure rapid and effective planning for the implementation of HIE projects. A Medical Trading Area is a geographic subdivision of the State based on locations where a large majority of people who live in a given area receive their healthcare. The designations of these areas ensures that state planning efforts for HIE are based not on theory, but on the needs of real patients and the health care providers they see for services. The primary goal of the planning grants is to secure the commitment of a majority of healthcare stakeholders (e.g. physicians, hospitals, clinics, etc.) within each Medical Trading Area to participate in an HIE that will operate as a component of a state-level HIE in the future. Only one planning grant per Medical Trading Area will be funded.

The results of the HIE planning grants will be the first meaningful step in Illinois to establish the governance, provider collaboration and social capital necessary to effectively absorb the financial investment in health information technology that will come from the federal government and private sources over the next five years. HFS will work with providers, other healthcare stakeholders and other state agencies to ensure that the state strategy for HIE is consistent with the objectives outlined in the American Reinvestment and Recovery Act's health information technology initiatives.

INDIANA

Indiana Health Informatics Corporation (IHIC)

Group Website: No website

Governance: 9-member Board

Source of Authority: Legislation

Source Document: www.in.gov/legislative/bills/2007/IN/IN0551.1.html

State Government Involvement: The IHIC was created by the state to guide and promote health information exchange in Indiana. Several representatives of state government are included on the Board of IHIC.

State CIO Involvement: No State CIO involvement is detected at this time.

Major Initiatives: The formation of the Indiana Health Informatics Corporation (IHIC) was enabled by the passage of legislation during the 2007 general session and became effective on July 1, 2007. The IHIC has set future focus areas of data availability, quality and patient safety and policy and envisions its role as a planner, promoter and advocate of Indiana Health Information Exchanges (HIE's).

One of these HIE's has gained considerable national attention as a mature HIE effort—the **Indiana Health Information Exchange (IHIE):** www.ihie.com.

The IHIE, on whose Board the State Commissioner of Health sits, has several health IT initiatives that are already in progress. Currently 30 hospitals in Indiana are part of IHIE's network, with several others in the pipeline. The IHIE is considered to be a national health information exchange best practice and because of this, they are involved in several federally funded activities to help support the growth and development of health information exchanges.

Initiatives include their DOCS4DOCS® clinical messaging service, which electronically delivers lab and test results securely and efficiently. The organization also offers the Quality Health First® program, a disease management service that is supported by an aggregated repository built by the Regenstrief Institute.

Iowa Electronic Health Information Advisory Council and Executive Committee

Group Website: www.idph.state.ia.us/hcr_committees/electronic_health_info.asp

Governance: 9-member Executive Committee and 18-member Advisory Council

Source of Authority: Legislation

Source Document: www.idph.state.ia.us/pdf/electronic_health_info.pdf

State Government Involvement: This initiative was legislatively created and is housed within the lowa Department of Public Health.

State CIO Involvement: The state CIO is a member of the Electronic Health Information Advisory Council.

Major Initiatives: The Council was created as a public-private effort to promote the adoption and use of health information technology in lowa. The Executive Committee of the Council makes recommendations to IDPH on improving health care quality, increasing patient safety, reducing health care costs, enhancing public health, and empowering individuals and health care professionals with real time medical information.

The legislation requires the development of a statewide health information technology plan by July 1, 2009. Standards and policies developed for the plan must promote and be consistent with national standards developed by the Office of the National Coordinator for Health Information Technology of the U.S. Department of Health and Human Services.

The council met for the first time Jan. 16, 2009. Seven workgroups have been formed to address various issues in the formation of an lowa eHealth network, with an expected federal grant opportunity on the horizon. lowa in the "planning" phase of the eHealth project, but stakeholders from across the health care spectrum are involved in the formation of policy related to the eHealth system.

The workgroups are:

- Continuity of Care and Interoperable EHRs
- Provider Adoption of EHR
- Patient ID
- HIE Infrastructure and Networks
- Safeguard Privacy and Security
- Finance and Sustainability
- HIT Workforce and Education

KANSAS

Kansas Health Information Advisory Panel

Group Website: No website

Governance: 7-member Panel

Source of Authority: Governor

Source Document: www.governor.ks.gov/news/NewsRelease/2008/nr-08-0219a.htm

State Government Involvement: The Governor called on the state agency, Kansas Health Policy Authority (KHPA), to create the Panel and the Governor (or designee) and the Executive Director of the KHPA (or designee) serve as ex-officio members of the Panel. This Panel serves as an advisory committee to the Governor and to the KHPA.

State CIO Involvement: The state CIO is not currently involved with the Panel.

Major Initiatives: To advance the availability of health information technology and decrease health care costs, Governor Sebelius asked the Kansas Health Policy Authority to establish an advisory panel for a statewide health information technology exchange in early 2008.

This served as a follow-on to the previously created Kansas Health Information Exchange (HIE) Commission which was tasked to advance the use of technology, decrease health care costs, and improve health care quality in Kansas.

That Commission issued a report identifying leadership and resource needs as the key issues to support and stimulate HIE on a statewide level. As the top agency for health care, the KHPA was best suited to provide this leadership and guide the development of a statewide health information technology and exchange. From this, the Panel was created.

Last Updated: 03.05.2009

KENTUCKY

Kentucky Health Information Exchange

Group Website: No website

Governance: The Kentucky eHealth Network Board will guide the development of the project in collaboration with the University of Kentucky and the University of Louisville.

Source of Authority: Governor/Lieutenant Governor

Source Document: http://migration.kentucky.gov/Newsroom/governor/20090115ehealth.htm

State Government Involvement: This is a state-driven initiative led by the Lieutenant Governor, in partner-ship with the Governor.

State CIO Involvement: State CIO staff sits on the eHealth Network Board.

Major Initiatives: On January 15, 2009, Kentucky announced a plan to create a statewide health information exchange (HIE) and released an RFP for development of the HIE infrastructure. The state plans for the HIE include a master patient index, a record locater service, single sign-on and authentication, clinical decision support and disease management tools, as well as support for e-prescribing.

The selected vendor will be asked to provide electronic medical records for selected physicians; connections to Kentucky Medicaid was well as private payers; and access for researchers to relevant data within the HIE. The project is expected to be fully implemented by 2010.

The Kentucky Health Information Exchange will create a technology infrastructure across the state. An existing Medicaid Transformation Grant of nearly \$5 million, awarded to fund HIE development, will be used for financing toward the HIE. By partnering with other payers at the state-level, it ensures that there is a critical volume of patient information available for providers in the HIE, and this feature will drive use by providers and eventual cost-savings for the Medicaid program as well as Kentucky's broader healthcare system.

LOUISIANA

Louisiana Health Information Exchange (LaHIE)

Group Website: www.dhh.state.la.us/offices/?ID=312; http://selhix.org/lahie.html

Governance: Nine member organizations have a representative on the Steering Committee.

Source of Authority: Louisiana Department of Health and Hospitals

Source Document: www.dhh.louisiana.gov/offices/news.asp?ID=156&Detail=747

State Government Involvement: LaHIE began as a contract between Louisiana Department of Health and Hospitals and the Office of the National Coordinator for Health Information Technology. Louisiana Medicaid Program is also part of LaHIE.

State CIO Involvement: The state CIO has been engaged with LaHIE stakeholder groups.

Major Initiatives: LaHIE is a collaborative consortium of public and private health care organizations with an interest in maximizing technology to improve access to health information and patient care. It was developed to be a prototype for health information exchange and its initial primary focus was to recover and recreate medical histories for Hurricane Katrina and Rita evacuees.

The LaHIE developed an online portal that allowed physicians affiliated with different hospitals exchange patient data. Hurricane Katrina demonstrated the value of electronic health records could have in preventing disruptions in care, according to physicians. The Bush administration after the hurricane awarded Louisiana a \$3.7 million grant to transition to an EHR system.

LaHIE has used the federal grant to develop a program under which hospitals would maintain EHRs on their own servers; however, some information — including patients' names, addresses, insurance information and allergies — would be stored on a central database.

The LaHIE steering committee identified short-term and long-term goals in the next three to five years.

Among the Phase II goals are:

- Formalizing the governance structure;
- Executing of a participant agreement;
- Developing of a sustainable business model;
- Recruiting new publishers; and
- Establishing an independent operating entity.

Last Updated: 04.06.2009

MAINE

Maine HealthInfoNet (HIN)

Group Website: www.hinfonet.org

Governance: 19-member Board of Directors

Source of Authority: Non-profit

Source Document: <u>www.hinfonet.org/about.html</u>

State Government Involvement: Representatives from the Maine Department of Health & Human Services and the Governor's Office of Health Policy and Finance sit on the Board.

State CIO Involvement: An Office of Information Technology representative has been designated as the administrator of the technology aspects of the project.

Major Initiatives: Organizations participating in Maine's HIN have now been connected via a secure Virtual Private Network or VPN. This new network was completed in August following five months of intensive technical work by project teams at hospitals, practices and HIN's own technical staff.

Interfaces between HIN and six participating organizations are now being tested and should be finalized this fall. Clinical content from each provider organization has been mapped, enabling the first exchange of clinical data to begin before the end of 2008.

This work represents substantial progress in the development of Maine's statewide health information exchange and has required an extraordinary level of collaboration between organizations that have not previously been linked electronically.

HIN's 24-month demonstration phase was launched in February. It includes participation by Maine's four largest health care delivery systems, Franklin Memorial Hospital, Martin's Point Healthcare and the Maine Center for Disease Control and Prevention. These organizations account for fifty-two percent of annual inpatient discharges and more than forty percent of annual outpatient visits across Maine.

MARYLAND

Maryland Task Force to Study Electronic Health Records

Group Website: http://mhcc.maryland.gov/electronichealth/index.htm

Governance: 26-member Task Force

Source of Authority: Legislation

Source Document: http://mlis.state.md.us/2005rs/billfile/sb0251.htm

State Government Involvement: This Task Force includes representatives of the Maryland Senate and the House of Delegates, the Office of the Attorney General, the Johns Hopkins and the University of Maryland Schools of Medicine, and the federal Veterans Administration, as well as 20 members appointed by the Governor to represent a broad range of provider and consumer interests, as specified in the enabling legislation.

State CIO Involvement: The designee from the Department of Budget and Management is an employee of the state CIO's Office of Information Technology.

Major Initiatives: The Maryland Health Care Commission (MHCC) and the Health Services Cost Review Commission (HSCRC) are working toward the development of a long-term, sustainable plan for supporting the effective, efficient, and secure exchange of health information across the spectrum of health care stakeholders. The Commissions are supporting the work of the Task Force to Study Electronic Health Records, established by legislation. Over the next two years, the Task Force will study the current use, and potential expansion, of electronic health records across the state. Its 26 members include representatives of the Maryland Senate and the House of Delegates, the Office of the Attorney General, the Johns Hopkins and the University of Maryland Schools of Medicine, and the federal Veterans Administration, as well as twenty members appointed by the Governor to represent a broad range of provider and consumer interests, as specified in the enabling legislation.

Its legislative mandate calls for the Task Force to identify the key policy, privacy, and economic issues that must be addressed in the creation of a regional health information organization, or RHIO, for Maryland, and to report its findings to the Governor and the General Assembly. The Task Force will evaluate potential obstacles to the establishment of a Maryland RHIO, and recommend broad policies that will govern electronic exchange of health information – policies about the ownership of this vital and personal information, as well as its privacy, security, identity, authentication, and use.

Last Updated: 03.06.2009

MASSACHUSETTS

Massachusetts Health Data Consortium (MHDC)

Group Website: www.mahealthdata.org

Governance: 24-member Board of Directors

Source of Authority: Incorporated as a 501(c)(3) non-profit organization. Various Administrations have delegated health care community coordination responsibilities to MHDC in areas such as HIPAA education and the Massachusetts Health Information Security and Privacy Collaborative (HISPC).

Source Document: www.mahealthdata.org/consortium/mission/history.html

State Government Involvement: Representatives of state government sit on the Board of Directors positions are designated for the Commonwealth of Massachusetts. In addition, staff members from various state agencies actively participate in Consortium forums, workgroups and events.

State CIO Involvement: The state CIO's office is represented in one of the Board seats reserved for state government.

Major Initiatives: The Consortium's mission is to promote health information technology and health information exchange. This mission is implemented through (1) facilitating discussion Forums that bring the health-care community together to address issues of concern to certain stakeholders (e.g., chief information officers, data managers, operations staff) and particular topics (e.g., behavioral health, electronic health record implementation, rural health); (2) holding educational events several times a year that attract renowned speakers and hundreds of participants; and (3) implementing projects to advance HIT and HIE such as the Massachusetts Health Information Security and Privacy Collaborative (HISPC).

Massachusetts SHARE (Simplifying Healthcare Among Regional Entities) is a regional collaborative initiative operated by the Massachusetts Health Data Consortium. MA-SHARE seeks to promote the inter-organizational exchange of healthcare data using information technology, standards, and administrative simplification, in order to make accurate clinical health information available wherever needed in an efficient, cost-effective, and safe manner. The early focus was on HIPAA standard administrative transactions, and it has now branched into clinical exchanges with an emphasis on "push" technology.

Additionally, Massachusetts has implemented a major initiative to enhance the use of electronic health records through the **Massachusetts e-Health Collaborative** (www.maehc.org), a non-profit public/private partnership formed in 2004 representing 34 member organizations. The Collaborative has since launched a pilot project in which three communities – Brockton, Newburyport, and Northern Berkshire – were awarded a total \$50 million commitment from Blue Cross Blue Shield of Massachusetts to fund its demonstration project phase of the full implementation of electronic medical records and assess the health/cost/community impacts.

The Massachusetts e-Health Collaborative and the Massachusetts Health Data Consortium and its subsidiary MA-SHARE are each crucial organizations influencing HIT efforts in Massachusetts. The eventual goal is to link the communities participating in the current pilot program – and others – to MA-SHARE.

MICHIGAN

Michigan Health Information Technology (HIT) Commission

Group Website: www.michigan.gov/mdch

Governance: 13-member Commission

Source of Authority: Legislation

Source Document: www.legislature.mi.gov/documents

State Government Involvement: The 13 members of the HIT Commission are appointed by the Governor and there are representatives from state government among its membership. The HIT Commission is housed within the state's Department of Community Health. The purpose of the Commission is to facilitate and promote the design, implementation, operation and maintenance of an interoperable health information infrastructure in the state; as well as advance the adoption of health IT throughout the state's health care delivery system.

State CIO Involvement: The state CIO is a member of the Commission.

Major Initiatives: The Michigan Health Information Network (MiHIN) initiative promotes the use of health information exchange to improve efficiency, quality and patient safety by enabling the availability of health information at the point of care. Spearheaded by the state Departments of Community Health and IT, the Michigan Health Information Network (MiHIN) completed its *Conduit to Care* report and presented it to Governor Granholm in December of 2006. *Conduit to Care* consisted of a statewide Steering Committee and six workgroups which brought approximately 200 healthcare, government and information technology leaders together to develop this report.

The Conduit to Care report is a comprehensive planning document or roadmap to statewide health information exchange. The report emphasizes a community or regional approach to foster existing local health care collaboration. It also establishes guiding principles for health information exchange to ensure privacy, security and confidentiality of consumers.

Over the past year and a half, the State of Michigan has funded over \$10 million to begin implementing the first phases of the MiHIN Roadmap. This consisted to two rounds of competitive bidding for regional players that resulted in, two implementation grants, seven planning grants, and funds for the MiHIN Resource Center. This process has provided the State and other stakeholders with a vast amount of knowledge and information needed to successfully implement statewide health information exchange.

Based on the outcomes of the regional planning and implementation efforts, in March of 2009, the Health Information Technology Commission approved a new approach to advance the MiHIN initiative. Michigan will develop a statewide health information exchange infrastructure by centralizing key technologies and administration to attain optimal economy of scale and achieve the most efficient use of resources. This puts Michigan in alignment with the intent and purpose of the American Reinvestment and Recovery Act, leveraging regionally based health information exchange achievements and allowing for the advancement of health information exchange in Michigan.

MINNESOTA

Minnesota e-Health Initiative

Group Website: www.health.state.mn.us/e-health

Governance: 25-member Advisory Committee

Source of Authority: Public-private partnership

State Government Involvement: This Initiative is spearheaded by the state Department of Health and involves stakeholders across state agencies in Minnesota in its Advisory Committee

Major Initiatives: The Minnesota e-Health Initiative is a public-private collaborative whose vision is to accelerate the adoption and use of health information technology in order to improve health care quality, increase patient safety, reduce health care costs and improve public health statewide.

The purpose of the initiative is to:

- Empower Consumers with information to make informed health and medical decisions.
- Inform and Connect Healthcare Providers by promoting the adoption and use of interoperable Electronic Health Records and electronic health information exchange.
- Protect Communities and Improve Public Health by advancing efforts to make public health systems interoperable and modernized.
- Enhance the Infrastructure through:
 - Adoption of standards for health information exchange.
 - Policies for strong privacy and security protection of health information.
 - Funding and other resources for implementation.
 - Assessing and monitoring progress on adoption, use and interoperability

The e-Health Initiative supports the fast-growing health information exchange initiative in Minnesota:

Minnesota Health Information Exchange (MN HIE)

Group Website: www.mnhie.com

Governance: 6-member Board of Managers including a representative from the Department of Human Services.

Source of Authority: Non-profit

Source Document: www.governor.state.mn.us/mediacenter/pressreleases/2007/

State Government Involvement: MN HIE is a public/private partnership between hospitals, insurance companies and the Minnesota Department of Human Services.

State CIO Involvement: The State CIO is monitoring MN HIE activities to assure compliance with State Statute and the Governors health information technology direction.

Major Initiatives: The Governor announced the state's participation when the project was unveiled in 2007 and in 2008, the Minnesota Legislature passed a bill authorizing the Minnesota Department of Human Services to participate as a sponsor in this private-public partnership.

MINNESOTA

Membership in MN HIE provides secure medical information for enrollees in state health care programs, including Minnesota Care, Medical Assistance and General Assistance Medical Care. MN HIE will connect doctors, hospitals and clinics across the state so they can quickly access secure electronic medical information.

Last Updated: 04.20.2009

MISSISSIPPI

Mississippi Health Information Infrastructure Task Force

Group Website: No website

Governance: 20-member Task Force

Source of Authority: Executive Order

Source Document: <u>www.governorbarbour.com/proclamations/Executive</u>

State Government Involvement: Representatives from state government agencies sit on the Task Force, as well as two members of the state House of Representatives and two members from the state Senate.

State CIO Involvement: The state CIO is a member of the Task Force, created by Governor Haley Barbour by Executive Order 979 in March 2007. The state CIO is also a member of the state delegation appointed by Governor Barbour to the Gulf Coast Health Information Technology Task (GCTF) created by the Southern Governors' Association.

Major Initiatives: The Task Force is directed to develop recommendations for an overall strategy for the adoption and use of health information technology and health information exchange to improve health and health care in Mississippi; identifying the benefits and costs of a comprehensive statewide health information technology infrastructure; addressing potential technical, scientific, economic, security, privacy, and other issues related to the adoption of interoperable healthcare information technology; identifying existing health information technology resources, including funding sources, to support the development of a statewide health information infrastructure; identifying technology options to realize a comprehensive health care information infrastructure; and ensuring health information privacy and security in electronic health information exchange.

Additionally, Mississippi is part of The Gulf Coast Health Information Technology Task Force (GCTF) is a collaborative group coordinated by the Southern Governors' Association (SGA) and composed of Governors' appointees representing Alabama, Louisiana, Mississippi, and Texas. The GCTF is charged with the responsibility of developing a plan for a technology infrastructure upon which health care delivery and financing organizations can provide the technologies and processes required to provide effective, efficient, and consumer-focused approaches to health care delivery. This initiative is supported with funding received from the Robert Wood Johnson Foundation and the U.S. Department of Health and Human Services' Office of the National Coordinator.

The first milestone for the task force was the development of an action plan for Mississippi Health Information Infrastructure, published in October of 2007. The plan detailed recommended activities, staffing requirements, funding options, and milestone dates necessary to achieve the executive order goals within the two year time frame. As a result of the work accomplished by the task force, the Office of the Governor was able to secure funding to establish a coastal Mississippi hybrid clinical data repository/health information exchange. The Mississippi Department of Information Technology Services (ITS) provided technical advice and oversaw the procurement process for RFP 3560, developed for Mississippi Foundation for Medical Care, Inc. dba Information and Quality Healthcare (IQH).

The primary goal of this RFP is a restructuring effort to improve patient care delivery in Mississippi, particularly for Pearl River, Stone, George, Hancock, Harrison, and Jackson counties. These are the state's six coastal counties that were most affected by Hurricane Katrina. As a proof-of-concept, the MS Coastal Health Informa-

MISSISSIPPI

tion Exchange (MSCHIE) was formed and will begin concentrating on these six coastal counties while focused on integrating patient information and linking providers on an interoperable network to improve patient care and reduce costs. The long-term vision is the formation of a statewide hybrid clinical data repository/health information exchange, so as the exchange matures and expands, the network would benefit all Mississippians.

After the completion of the procurement process for RFP 3560, Medicity Inc. received a notice of award from IQH on September 20, 2008 as the best technical and lowest cost vendor. Subsequent contract negotiations have been finalized and implementation has begun for the hybrid HIE/data repository with hopes of live data being exchanged amongst the initial stakeholder by the middle of June 2009.

Last Updated: 03.06.09

MISSOURI

Transform Missouri

Group Website: http://transform.mo.gov

Source of Authority: Governor

Source Document: http://governor.mo.gov/Transform Missouri Initiative

State Government Involvement: The Transform Missouri Initiative will include planning and implementation of a HIT initiative.

State CIO Involvement: The state CIO will lead the Health IT efforts of the American Recovery and Reinvestment Act (ARRA) in coordination with the Governor's Transform Missouri Initiative, as well as the state public health and social services agencies. The money from the ARRA is expected to flow through the Transform Missouri Initiative.

Major Initiatives: The state CIO is currently in the process of compiling a broad Task Force to assist in promoting, planning and implementing health IT in the state. This Task Force has not yet been fully formulated and is just in the beginning stages.

Additional HIT efforts in Missouri include:

MO HealthNet: Legislation reforming Missouri's state healthcare program passed during the 2007 Legislative Session. Senate Bill 577 replaces the Medicaid program with MO HealthNet, which focuses on preventive care over more costly emergency care and emphasizes transparency and consumer choice. Senate Bill 577 is located at www.senate.mo.gov/07info/BTS Web/Bill.aspx?SessionType=R&BillID=28834

CyberAccess: Located within the Department of Social Services Division of Medical Services, is an innovative Electronic Health Record program for Medicaid recipients is available to their healthcare providers. The webbased tool, called CyberAccess, allows physicians to prescribe electronically, view diagnosis data, receive alerts, select appropriate preferred medications and electronically request drug and medical prior authorizations for their Medicaid patients. More information is available at www.dss.mo.gov/mhd/cs/index.htm.

MONTANA

HealthShare Montana

Group Website: www.healthsharemontana.org

Governance: 21-member Board of Directors

Source of Authority: Non-profit

Source Document: http://healthinfo.montana.edu/healthit.html

State Government Involvement: Several representatives from state government agencies sit on the Board and are involved in this initiative.

State CIO Involvement: The state CIO is a member of the Board.

Major Initiatives: HealthShare Montana, formerly known as the Montana HIT Task Force, began as a grass-roots coalition of healthcare providers, state and federal agencies, consumers and other stakeholders that share in common the primary goal of promoting the use of electronic health information technology throughout the state.

HealthShare Montana is an organization of healthcare providers and stakeholders brought together with the assistance of U.S. Senator Max Baucus as a result of his desire to improve healthcare for Montanans. These representatives and stakeholders met throughout 2006 and 2007. The meetings were held at several locations around Montana, and participants attended in person and via phone and videoconference. Thirty-three stakeholders were represented. Categories of stakeholders ranged from healthcare providers and healthcare facilities to payers, state government, physician and hospital associations, and representatives of the Office of Rural Health and Montana educational institutions.

Issue-specific groups titled Governance, Finance, Technology, Physician Champions, Legislative, and Public Interest have formed from volunteers, and as a result of the work of several of these groups, an organizational resolution and a Steering Committee were approved at the January 19, 2007 meeting. Articles of Incorporation have been accepted by the State of Montana, and HealthShare Montana is now a Public Benefit Corporation. Bylaws to reflect this function and purpose have been drafted and approved. An application to become a 501(c)3 corporation has been submitted.

On July 11th, 2007, a formal board was elected. The HealthShare Montana Board will be tasked with maintaining and refreshing the vision, strategy, and outcome metrics underpinning the project. It will also provide advocacy when needed and build trust, buy-in, and participation of major stakeholders statewide. Additionally, the Board will work to assure equitable and ethical approaches in implementing HIT, HIE, and all forms of telehealth in Montana. It may also raise, receive, manage, and distribute state, federal, or private funds. It will prioritize and foster interoperability for statewide and regional projects.

NEBRASKA

Nebraska Information Technology Commission eHealth Council

Group Website: www.nitc.ne.gov/eHc/index.html

Source of Authority: Lieutenant Governor and the Nebraska Information Technology Commission

Source Document: www.nitc.ne.gov/eHc/eHealthCounciloverviewJan2008.pdf

State Government Involvement: The Nebraska Information Technology Commission, which is chaired by the Lieutenant Governor, formed the eHealth Council in 2007. The eHealth Council includes representatives of state government as well as representatives from public health, health care providers, eHealth initiatives, payers and employers, consumers, and resource providers.

State CIO Involvement: The Office of the CIO is represented on the eHealth Council and provides administrative and programmatic support.

Major Initiatives: The Nebraska Information Technology Commission's eHealth Council was created to foster the collaborative and innovative use of eHealth technologies through partnerships between public and private sectors, and to encourage communication and coordination among eHealth initiatives in Nebraska. The eHealth Council is currently developing a state eHealth plan.

The eHealth Council is charged with:

- Reviewing the current status of healthcare information technology adoption by the healthcare delivery system in Nebraska;
- Addressing potential security, privacy and other issues related to the adoption of interoperable healthcare information technology in Nebraska;
- Evaluating the cost of using interoperable healthcare information technology by the healthcare delivery system in Nebraska;
- Identifying private resources and public/private partnerships to fund efforts to adopt interoperable healthcare information technology;
- Supporting and promoting the use of telehealth as a vehicle to improve healthcare access to Nebraskans; and
- Recommending best practices or policies for state government and private entities to promote the adoption of interoperable healthcare information technology by the healthcare delivery system in Nebraska.

Other major initiatives with involvement from the state of Nebraska and the Information Technology Commission include:

Nebraska Health Information Initiative (NeHII)

Group Website: www.nehii.org

Governance: NeHII Board of Directors

State Government Involvement: The Lieutenant Governor sits on the Board of Directors and a grant from the Nebraska Information Technology Commission provided partial funding for the pilot in 2009. NeHII is also actively involved in the Nebraska Information Technology Commission's eHealth Council.

NEBRASKA

State CIO Involvement: Office of the CIO staff participates in the NeHII Consumer Advisory Council.

Major Initiatives: NeHII celebrated its official launch on April 2, 2009 and will connect all facets of the health-care industry through the same system, allowing hospitals, physicians, laboratories, radiology centers, and pharmacies to share patient information in real-time across the state. NeHII is utilizing a hybrid federated model with an opt-out platform. The statewide rollout is planned for July 2009.

Nebraska Statewide Telehealth Network

Group Website: www.netelehealth.net

Governance: Nebraska Statewide Telehealth Network Governing Board

State Government Involvement: The State of Nebraska (including the University of Nebraska, Nebraska Department of Health and Human Services, the Nebraska Information Technology Commission, and the Office of the CIO) has acted as a partner and facilitator in the development of the Nebraska Statewide Telehealth Network.

State CIO Involvement: The Office of the CIO has acted as a partner and facilitator.

Major Initiatives: The Nebraska Statewide Telehealth Network connects over 100 hospitals and public health departments in Nebraska, connecting rural patients to clinicians through videoconferencing and allowing professionals across the state to collaborate. The network received a \$95,000 appropriation in the most recent spending package approved by President Barack Obama.

NEVADA

Nevada Partnership for Value-Driven Care

Group Website: www.healthinsight.org/partnerships/transparency/nevada.html#mission

Governance: Steering Committee

Source of Authority: Non-profit

State Government Involvement: Several state government agencies have representation on the Steering Committee.

State CIO Involvement: NASCIO could not detect state CIO involvement

Major Initiatives: The Nevada Partnership for Value-Driven Health Care is a multi-stakeholder community health care collaborative made up of public and private payers, purchasers, providers (institutional and individual) and the public. The Partnership was created under the guidance of HealthInsight, which is a private, non-profit Medicare Quality Improvement Organization (QIO) dedicated to improving the healthcare systems of Nevada and Utah.

On September 3, 2008 the Nevada Partnership was designated a Chartered Value Exchange (CVE). The Partnership has been designated as a "Community Leader" by the Agency for Healthcare Research and Quality (AHRQ).

The Partnership's goal is to improve the quality, accessibility, safety, equity, efficiency, and coordination of health care in Nevada by providing patient-centric health care and a system that provides a full range of information to consumers about the quality and cost of health care options. To accomplish this goal, the Partnership will:

- Utilize provider-level data from multiple payer sources
- Aggregate, analyze and provide comparative reports on consensus-derived measures of quality, price/cost, and volume
- Support the transparency of these data in order to stimulate quality improvement
- Inform consumer decision-making, and develop and align provider and consumer incentives

NEW HAMPSHIRE

New Hampshire Citizens Health Initiative

Group Website: www.steppingupnh.org

Governance: 2 Co-Chairs and Executive Director

Source of Authority: Governor

Source Document: <u>www.nh.gov/governor/news/2005/092205health.htm</u>

State Government Involvement: This Initiative was created by the Governor and brings lawmakers and state government officials together with health care providers, insurers, business, consumers and workers.

State CIO Involvement: The state CIO is not currently involved with this effort.

Major Initiatives: In 2008, Governor John Lynch has called on the Citizens Health Initiative to develop a plan to improve the health information infrastructure within the state to help increase the quality and affordability of health care for its residents.

In an <u>executive order</u>, Governor Lynch asked the Citizens Health Initiative to convene working groups with members from various fields to create a roadmap to be submitted to the governor.

The working groups examined:

- How to facilitate the adoption of e-Health standards and interoperability requirements and the regional and national exchange of data;
- Legal barriers to the adoption of health information technology health information exchange and ways to remove those barriers;
- Approaches to continue ensuring the confidentiality and privacy of electronic health information;
- Opportunities for public-private partnerships to promote and sustain health information technology projects in the state;
- Options for expanding the implementation of health information technology through the state; and
- Performance measures to determine the success of the implementation of health information technology.

The Citizens Health Initiative submitted their <u>report</u> to the Governor in January of 2009 which presented a roadmap for both the industry and public policy makers to achieve a fully deployed and integrated system of HIT and HIE.

NEW JERSEY

New Jersey Health Information Technology Commission

Group Website: www.nj.gov/health/bc/hitc.shtml

Governance: 19-member Commission

Source of Authority: Governor

Source Document: https://wwwnet1.state.nj.us/GOV/APPT/GOV APPT WEB/Default.aspx

State Government Involvement: Several representatives of state government sit on the Commission including the Commissioners of Health and Senior Services, Banking and Insurance, Children and Families and Human Services.

State CIO Involvement: NASCIO staff research could not detect state CIO involvement.

Major Initiatives: The NJ-HIT Commission was created by the New Jersey Health Information Technology Promotion Act, and its members, with the assistance of the Department of Banking and Insurance, are charged with developing, implementing and overseeing the establishment and creation of a state-wide health information technology plan utilizing electronic medical records.

Among other things, the Commission will be looking to the national standards for the State's HIT system for security, privacy, data content, format, vocabulary and information transfer standards.

NEW MEXICO

New Mexico Health Information Collaboration (NMHIC)

Group Website: www.lcfresearch.org

Governance: 4 LCF/NMHIC Executives

Source of Authority: Non-profit

Source Document: www.lcfresearch.org/additional/LCF-NMHIC Profile for NHIN.doc

State Government Involvement: State government agencies are involved in this Collaboration.

State CIO Involvement: NASCIO staff research could not detect state CIO involvement

Major Initiatives: The NMHIC is the name of New Mexico's rapidly growing health information exchange (HIE) network and the community collaborative that has supported its development with time and funding. The collaborative includes important New Mexico stakeholders representing health care providers, payers, employers, state agencies and consumers. NMHIC was created in 2004, and continues to be fully staffed and operated by the Lovelace Clinic Foundation (LCF). The NMHIC Clinician Portal includes:

- Summary Patient Record: Access to a patient's Summary Patient Record, also referred to as a Continuity of Care Record, portable amongst different health care systems and providers, for key patient data. This data would usually include: problem list/diagnoses, medication list, allergy list, immunizations, procedures, and dates of service and names of providers, viewed through the NMHIC Clinician Portal.
- Lab Results: Access to a patient's laboratory results from multiple laboratories, viewed through the NMHIC Clinician Portal.
- Radiology and Imaging Reports: Access to a patient's radiology and imaging reports from multiple radiology providers, viewed through the NMHIC Clinician Portal.
- Discharge Summaries: Access to a patient's discharge summaries from multiple hospitals, viewed through the NMHIC Clinician Portal.
- Access to patient record information via the Nationwide Health Information Network (NHIN). NMHIC
 users will also be able to access patient record information from other organizations that are
 connected to the NHIN, including the Veterans' Health Administration, the Department of Defense
 Military Health System, the Indian Health Service, etc., viewed through the NMHIC Clinician Portal.

Last Updated: 04.13.2009

New York State Department of Health Office of Health Information Technology Transformation (OHITT); and New York eHealth Collaborative (NYeC)

Group Website: www.health.state.ny.us/technology; www.nyehealth.org

Governance: NYS OHITT is an office established within the New York Department of Health; NYeC has an 11-member Board of Directors from the private sector as well as participation in collaborative activities by members of the New York State Department of Health

Source of Authority: Commissioner of Health

Source Document: www.health.state.ny.us/technology

State Government Involvement: The NYS Department of Health Office of Health Information Technology Transformation (OHITT) is an office formed within the Department of Health by recommendation of the Governor in 2007 and is charged with management of multiple health IT grants and other programs to support adoption of a statewide strategy for Health IT in New York as well as collaboration with NYeC to make recommendations to the Commissioner of Health and Governor's office regarding Health IT issues.

NYeC is a state-designated public-private partnership that develops and recommends statewide health IT policy through a collaborative process working closely with the Department of Health Office of Health Information Technology Transformation.

State CIO Involvement: Currently, the state CIO does not have any direct oversight over the HIT initiatives for New York. However, the State CIO has convened a Health IT Cluster Group of CIO's to collaborate and discuss on further developing an open, HIT strategy within NYS.

Major Initiatives: NYeC is one of many health IT activities happening in New York. Founded by healthcare leaders across the state, with leadership and support from the New York State Department of Health, this is a public-private partnership that will serve as a focal point for health care stakeholders to build consensus on state health IT policy priorities, and collaborate on state and regional health IT implementation efforts.

Key responsibilities include (1) convening, educating and engaging key constituencies, including health care and health IT leaders across the state, Regional Health Information Organizations, Community Health Information Technology Adoption Collaboratives ("CHITAs"), and other health IT initiatives; (2) developing Statewide Policy Guidance through a transparent governance process and (3) evaluating and establishing accountability measures for New York's health IT strategy.

At the present time, New York State has elected to develop health information policies, standards and technical protocols governing the health IT infrastructure – collectively referred to as Statewide Policy Guidance. NYeC, in partnership with the office of Health Information Technology Transformation (OHITT) within DOH, is leading the development of statewide policy guidance through an open, transparent, and consensus driven process to which all contribute to ensure health IT advances in the public's interest. This process is referred to as the Statewide Collaboration Process (SCP). The SCP is largely driven by the efforts of its four collaborative workgroups, which recommend policies and procedures, standards, technical approaches and services to the NYEC Policy and Operations Council, the NYEC Board and the NYS DOH. The four workgroups are: (1) Clinical Priorities; (2) Privacy and Security; (3) Technical Protocols and Services; (4) EHR Collaborative. Each workgroup is

NEW YORK

co-chaired by someone from the private sector as well as someone from the NYS DOH with expertise in that area. As part of its commitment to the public-private infrastructure evolving to support statewide interoperability, the State of New York has committed \$5 million to NYeC over the next two years to manage the statewide collaborative process.

Key strategies and activities include:

- Developing Health IT and HIE Policies and Standards
- Evaluating and Establishing Accountability Measures for NY's Health IT Strategy
- Convening, Educating, and Engaging Key Constituencies

NYeC has published reports on interoperable health information exchange and on advancing health information strategy in New York that are available on their website.

NYS Department of Health Office of Health Information Technology Transformation (OHITT) is an office formed within the Department of Health by recommendation of the Governor in 2007 and is charged with management of multiple health IT grants and other programs to support adoption of a statewide strategy for Health IT in New York. OHITT also is in close collaboration with NYeC to make recommendations to the Commissioner of Health and Governor's office regarding Health IT issues. OHITT also collaborates and gives recommendation on health IT issues for other departments within the department of health as well as the Governor's office and other health agencies and organizations within New York. Currently this office is managing a number of initiatives and projects including over \$200 million in competitive grant projects for health IT that represent all regions of New York State and the office also is involved in the design and support of development of a state wide health information technology infrastructure called the State Health Information Network of New York (SHIN-NY).

Updated: 04.20.2009

NORTH CAROLINA

North Carolina Health Information Technology Strategic Planning Task Force

Group Website: www.ncrecovery.gov

Governance: The Task Force is composed of representatives of major medical centers, physicians, mental health, universities and several non-profits including NCHICA and Blue Cross/Blue Shield of North Carolina.

Source of Authority: Governor's Directive

State Government Involvement: The Task Force is chaired by the Deputy State Health Director and includes appointees from major health care sector representatives. The Task Force is supported by staff and subject matter experts from the Department of Health and Human Services, the Office of Management and Budget, Information Technology Services and the Governor's Office and sector organizations.

State CIO Involvement: The Deputy SCIO and other staff are directly involved in the work of the Task Force.

Major Focus: In April of 2009, the Governor established this Task Force to develop the HIT Strategic Plan that will shape a vision for the state and guide future information technology decisions. This work will also position North Carolina to make the best use of new federal ARRA stimulus funds for Health IT.

Prior initiatives in North Carolina making strides toward statewide health information include:

Healthcare Information and Communications Alliance (NCHICA)

Group Website: www.nchica.org

Governance: 30-member Board of Directors

Source of Authority: Executive Order of the Governor

Source Document: www.nchica.org/AboutNCHICA/CorpInfo/ExecOrder.htm

State Government Involvement: Representatives from state government sit on the Board and are also active in technology, clinical and policy workgroups, committees, task forces and projects.

State CIO Involvement: The staff of the state CIO's office has been involved in the work of NCHICA for several years. Currently, a member of the SCIO's Policy staff is a voting member of the NC Health Information Exchange Council created by NCHICA. In addition, the Deputy SCIO for Enterprise Services is providing technical advice to the Technology and Operations Committee of the NC HIE Council.

Major Initiatives: NCHICA is the premiere consortium in North Carolina that champions the adoption of information technology and enabling policies to improve health and care across North Carolina and with adjacent states when cross-border care is involved. Working closely with its members, NCHICA operates in many venues as a neutral convener, promoter, educator, catalyst and innovator. NCHICA leads demonstration projects, hosts educational sessions, fosters collaborative efforts and supports statewide and national initiatives that promote standards-based IT and policy in health and care statewide.

NORTH CAROLINA

NCHICA led NC's participation in Phases 1 and 2 of the Health Information Security and Privacy Collaboration (HISPC) funded by ONC and the Agency for Health Research and Quality (AHRQ) in conjunction with the National Governors Association and is currently working on Phase 3. Under contract with the HHS Office of the National Coordinator for Health Information Technology (ONC), NCHICA has been the focus for NC's participation in the development of the Architectural Prototypes for the Nationwide Health Information Network (NHIN) and the Trial Implementations phase that featured several of the key "use cases" to demonstrate the appropriate exchange of information among patients, hospitals, doctors, laboratories, and Federal agencies (SSA, DoD, VA, IHS).

NCHICA is using the expertise gained throughout its NHIN collaboration among leading hospitals, physician practices, government agencies, payers, and vendors to accelerate development of local and statewide health information exchange (HIE).

Last Updated: 04.17.09

NORTH DAKOTA

North Dakota Health Information Technology Steering Committee

Group Website: <u>www.governor.state.nd.us/boards/boards-query.asp?Board_ID=155</u>

Governance: 20-member Board

Source of Authority: Legislation

Source Document: www.legis.nd.gov/assembly/60-2007/bill-text/HAVG0200.pdf

State Government Involvement: The Steering Committee consists of the state Health Officer, the Governor or the Governor's designee, the Executive Director of the Department of Human Services or the Executive Director's designee, individuals appointed by the Governor to represent state government interests, and individuals appointed by the state Health Officer to represent health information technology stakeholders.

State CIO Involvement: The State CIO sits on the Steering Committee as a representative of the Governor.

Major Initiatives: The steering committee is charged with making recommendations for implementing a statewide interoperable health information infrastructure that is consistent with emerging national standards and promotes interoperability of health information systems for the purpose of improving health care quality, patient safety, and overall efficiency of health care and public health services.

The steering committee is also charged with the development of a grant program that will fund collaborative health information technology projects that will support health care providers in planning and implementing interoperable health information technology systems.

The committee is proposing the appointment of a ND Health Information Technology Officer to coordinate statewide health IT initiatives and develop the electronic medical records exchange system.

OHIO

Ohio Health Information Partnership Advisory Board

Group Website: http://ohipab.pbwiki.com

Governance: Two Co-Chairs for this 27-member Board

Source of Authority: Governor

Source Document: http://das.ohio.gov/asd/press/PDFS/RELHIPAB2008031.pdf

State Government Involvement: The Governor appointed the two Co-Chairs of the Board and several representatives from state government sit on the Board.

State CIO Involvement: A prior state CIO served as a Co-Chair of this Advisory Board.

Major Initiatives: On October of 2008, the Advisory Board heard recommendations from each of its four committees—Adoption, Exchange, Governance and Finance. This Board is legislatively sunsetted as of December, 2008.

Additional health IT organizations making an impact in Ohio include the Health Policy Institute of Ohio (www.healthpolicyohio.org) which is an independent, nonpartisan, statewide center that informs Ohio health policy by forecasting health trends, analyzing key health issues, and communicating current research to policymakers, state agencies and other decision-makers. The Institute released Assessing Health Information Technology in Ohio in late 2005, and followed this up with A Strategic Roadmap and Policy Options for the Effective Adoption of Health Information Technology and Exchange in Ohio in 2006. That same year, the Institute was awarded a contract from the Federal government to study how Ohio's privacy and security laws and business practices would affect this exchange of electronic health information. The Institute has also worked closely with the Governor's office and the Ohio General Assembly to bring attention to this issue.

In addition, HealthBridge (www.healthbridge.org) is a not-for-profit health information exchange serving Greater Cincinnati and surrounding areas. Founded in 1997, HealthBridge is one of the nation's largest, most advanced and most financially successful community health information exchanges. HealthBridge provides connectivity for 29 hospitals, more than 4400 physician users, 17 local health departments, dozens of physician offices and clinics, as well as nursing homes, independent labs, radiology centers and others in the healthcare community. Through their clinical messaging system, they deliver over 2.4 million results (laboratory, radiology, transcription and ADT) to more than 4,400 physicians each month. HealthBridge represents nearly 95% of the hospital sector activity in the Cincinnati region.

OKLAHOMA

Oklahoma Health Information Security and Privacy Council (OKHISPC)

Group Website: No website

Governance: 25-member Council which serves at the pleasure of the Governor

Source of Authority: Executive Order

Source Document: http://www.sos.state.ok.us/documents/Executive/608.pdf

State Government Involvement: The Governors office and several state agencies provide leadership and representation on the Council.

State CIO Involvement: The state CIO is not currently involved in OKHISPC.

Major Initiatives: The Executive Order issued in 2008 created the Council to plan and implement recommendations for an Oklahoma Health Information Exchange. The council primarily provides state leadership and coordination of HIE efforts, works to facilitate a statewide dialogue on privacy and security, promotes lessons learned among stakeholder to facilitate the implementation of HIE, evaluate and makes recommendations to the Governor's office on a) the current status of HIE by the health care delivery system within Oklahoma b) emerging security and privacy issues related to the adoption of interoperable HIT in Oklahoma c) establishment of an Office of Health Information Exchange.

OKHISPC established a Health IT Plan with 3 Objectives:

- 1) **Privacy and Security:** Facilitate electronic exchange, access, and use of electronic health information, while protecting the privacy and security of patients 'health information. Advance privacy and security policies, principles, procedures, and protections for health information access in the state of Oklahoma
- 2) **Interoperability:** Enable the movement of electronic health information to support patients' health and care needs across Oklahoma and throughout the nation. Enable the exchange of health information to support Oklahoma's population-oriented uses through collaborative efforts among all stakeholders.
- 3) **Adoption:** Promote statewide deployment of electronic health records (EHRs) and personal health records (PHRs) and other consumer health IT tools. Promote statewide adoption of technologies to improve population and individual health.

OREGON

Oregon Health Information Infrastructure Advisory Committee (HIIAC)

Group Website: www.oregon.gov/OHPPR/HIIAC.shtml

Governance: 23-member Committee

Source of Authority: Executive Order

Source Documents: <u>www.oregon.gov/OHPPR/HIIAC/ExecutiveOrder2008.pdf</u>

www.oregon.gov/OHPPR/HIIAC/Final HIIAC Report.pdf

State Government Involvement: The Health Information Infrastructure Advisory Committee (HIIAC) was created by Executive Order in 2008. The members were appointed by the Governor and represent consumers, the health care provider community, health care insurance plans, public health organizations, safety-net health care providers, the information technology field, the research community and academia. The HIIAC is cochaired by the Senior Health Policy Advisor to the Governor.

State CIO Involvement: The CIO of Oregon's Department of Human Services (OR-DHS) currently serves in an advisory role for statewide health IT initiatives. The State CIO receives regular briefings from the OR-DHS CIO as substantive developments occur.

Major Initiatives: The HIIAC was charged with making policy recommendations in order to:

- Reduce barriers to electronic health information exchange while maintaining the privacy and security of individuals' health information;
- Establish an appropriate role for the state in building and maintaining a health information infrastructure;
- Facilitate the adoption of state electronic health information infrastructure standards and interoperability requirements, based on federal requirements and national standards;
- Facilitate collaboration between statewide partners, both public and private; and
- Develop evaluation metrics to measure the implementation of electronic health information technology and the efficiency of electronic health information exchange in Oregon.

The HIIAC submitted its initial findings and recommendations to the Oregon Health Fund Board in November 2008, and these recommendations were adopted in their entirety and made a part of the Oregon Health Fund Board Final Report. The HIIAC recommendations support health care reform in Oregon by promoting the adoption of electronic health records and health information exchange throughout the state. Many of the Oregon Health Fund Board recommendations are incorporated into legislation that is currently before the 75th Oregon Legislative Assembly. These proposals include the creation of a Health Authority, a Health Authority Board, and a Health Information Technology Oversight Council within state government.

Additionally, the state of Oregon has a number of IT assets or initiatives underway that can be leveraged as part of a future electronic health information exchange infrastructure.

OR-DHS implemented a new **Medicaid Management Information System** (MMIS) in December 2008. The MMIS is a federally required information system used to manage and report on the \$3.1 billion per year in Medicaid payments that are made to over 31,000 Oregon Medicaid providers for services rendered to over 400,000 Oregonians. Eventually, the MMIS data warehouse will be enhanced to receive clinical data to support quality health care programs as detailed in the federal Medicaid Information Technology Architecture (MITA)

OREGON

Concept of Operations. The MMIS will serve as a major hub for electronic health information exchange and will populate personal health record bank accounts for Medicaid recipients.

The **Health Record Bank of Oregon** (HRB Oregon) is a Medicaid Transformation Grant project. The HRB Oregon project is currently evaluating proposals to build and implement a health record bank that will store the health information of Oregon Medicaid beneficiaries in a central electronic location and make it available to the beneficiary/provider on a secure web-site. The **Behavioral Health Integration Project** (BHIP) is the electronic health record and hospital management system for the new Oregon State Hospital, which is currently under construction. BHIP will also enable state and county behavioral health systems to exchange electronic health records. **Oregon's Statewide Children's Wraparound Initiative** proposes a system of care of connected services for children with complex physical and mental health needs. It is envisioned that coordinated service-related information, including medical information, will be available to appropriate parties through a Web-based electronic record.

PENNSYLVANIA

Pennsylvania Health Information Exchange (PHIX)

Group Website: www.rxforpa.com/phix.html

Governance: PHIX Executive Office

Source of Authority: Executive Order

Source Document: <u>www.rxforpa.com/assets/pdfs/PHIX.pdf</u>

State Government Involvement: The Governors Office of Health Care Reform provides strategic vision, policy, and planning guidance to the PHIX. The PHIX Advisory Council, includes state agency and legislative representation.

State CIO Involvement: In 2008, the PHIX IT Director is directed, via an Executive Order, to report to the Deputy CIO of Health and Human Services in the Office of Information Technology (under the Office of the CIO).

Major Initiatives: The goal of PHIX is to create a statewide system for improving the authorized access to electronic health information for all Pennsylvania's health care providers, payers and patients.

The PHIX is to perform activities necessary to develop, implement and manage a statewide health information exchange and other health information technology initiatives within the Governor's Prescription for Pennsylvania. The Pennsylvania eHealth Initiative (PAeHI) is an advisory organization to PHIX and may provide research, analysis and recommendations.

Last Updated: 03.10.2009

RHODE ISLAND

Rhode Island Health Information Exchange

Group Website: www.riqi.org

Governance: Department of Health and Rhode Island Quality Institute

Source of Authority: Governor

Source Document: <u>www.rilin.state.ri.us/News/pr1.asp?prid=5220</u>

State Government Involvement: The state department of health works in partnership with the Rhode Island Quality Institute to manage the Health Information Exchange, and a number of state agencies are also involved in this effort.

State CIO Involvement: The State CIO is not involved in this effort at this time.

Major Initiatives: Rhode Island has become a national leader in EHR adoption. The Rhode Island Quality Institute has been working to develop a statewide Health Information Exchange and many committees involve representatives of the healthcare and government communities.

In 2008, the Governor signed into law the Rhode Island Health Information Exchange Act to create a statewide health information exchange. The state tasked the Rhode Island Quality Institute; a private agency with state government involvement, to run the voluntary health data exchange and the Department of Health will oversee this effort.

The Act creates patient privacy and data security protections for information that will be shared through CurrentCare—Rhode Island's Health Information Exchange (HIE).

Consumer protections in this law include:

- A specification that participation in the HIE is voluntary—both consumers and providers choose whether or not to participate;
- The ability to obtain a copy of confidential health information from the HIE;
- The ability to obtain a copy of a Disclosure Report relating to access of a patient's confidential health information through the HIE;
- Notification of breach of security of the HIE consistent with the RI identity theft law;
- The right to terminate participation in the HIE;
- The right to request that inaccurate information provided to the HIE be corrected through a provider;
- Oversight by the Department of Health;
- The creation of an HIE Advisory Commission to make recommendations to the Department of Health regarding the use of health information in the HIE; and
- Civil and criminal penalties for violation of the Act.

Last Updated: 04.15.2009

SOUTH CAROLINA

South Carolina Health Information Exchange (SCHIEx)

Group Website: www.schiex.org

Source of Authority: Public-private partnership

Source Document: www.dhhs.state.sc.us/Internet/pdf/SCHIEx%20Release.pdf

State Government Involvement: SCHIEx is a collaborative effort between the South Carolina Department of Health and Human Services, the South Carolina Office of Research and Statistics and several health care associations. All SCHIEx data is stored in ORS' secure data warehouse.

State CIO Involvement: NASCIO staff could not detect state CIO involvement.

Major Initiatives: In July of 2008, South Carolina officials set plans to launch a health information exchange for the state's 700,000 Medicaid patients for SCHIEx to connect hospitals, doctors, clinics and other healthcare providers with access to Medicaid beneficiaries' medical records. It was paid for by HHS, which contributed \$250,000 to implement the system. It's also backed by the South Carolina Hospital Association, the South Carolina Primary Care Association and several state agencies.

The SCHIEx system includes a records locator service along with a system that links disparate health databases. Providers now have access to a broad medical history on patients, including diagnoses, medications and test results. The state will utilize up to 10 year's worth of a beneficiary's Medicaid claims to create a network that allows health care providers to see medical histories of patients, including prescribed medications and treatment they have received at other health care facilities.

In subsequent stages of SCHIEx, the state plans to facilitate sharing of data from existing electronic medical records (EMRs) systems and integrate immunization records, lab results and hospital records.

SOUTH DAKOTA

South Dakota e-Health Collaborative

Group Website: www.ehealth.dsu.edu

Governance: South Dakota Department of Health and Dakota State University

Source of Authority: Executive Order

Source Document: www.ehealth.dsu.edu/eHealthCollaborativeExecutiveOrder.pdf

State Government Involvement: The secretary of the Department of Health provides oversight of the Collaborative and appoints its membership

State CIO Involvement: A representative from the State CIO's office is involved with the Collaborative.

Major Initiatives: In February of 2009, the Governor signed an executive order formally establishing the Collaborative, which will provide leadership and coordination of health information exchange (HIE) across the state. The collaborative began meeting informally in spring 2008, prompted by a request from the Governor's Health Care Commission for a long-range plan to facilitate interoperable health IT adoption to improve the quality, safety, and efficiency of healthcare in South Dakota.

The collaborative currently has active members from several key stakeholder groups, including physicians, consumers, state legislators, insurance companies and other payers, state and local government officials, health information managers, lawyers and project administrators.

In 2008, four Work Groups were established for the Collaborative in area of: Patient/Provider Education and Outreach, Patient Consent and Legal, Payer/Provider Data Consensus and Technical Issues. The collaborative must submit an annual report to the governor and the secretary of the Department of Health.

Last Updated: 03.26.2009

TENNESSEE

Tennessee Office of e-Health Initiatives

Group Website: www.tn.gov/ehealth

Governance: Governor's e-Health Advisory Council (16 members)

Source of Authority: Executive Order

Source Document: www.tennesseeanytime.org/ehealth/documents/ExecutiveOrder35.pdf

State Government Involvement: The Council is administered under the Department of Finance & Administration.

State CIO Involvement: The State CIO works closely with the Director of the Office of e-Health Initiatives to coordinate efforts around the use of health information technology.

Major Initiatives: The Office spearheads the Tennessee e-Health Network, the state's mechanism for statewide health information exchange. Tennessee opened its statewide broadband network – the network the state uses to conduct its business – for the benefit of health care providers and created a physical home for the exchange of patient information. This acts as a private backbone that already exists in all 95 counties. While you can get to the public internet, information that travels the network is not transmitted across the internet. The network offers secure, high-speed broadband capabilities with very high security protocols and service performance level guarantees to practitioners at state-negotiated rates. The state of Tennessee has carved out a specific "channel" on its network and tailored it to the particular security concerns related to health information. There is an added layer of HIPAA-compliant authentication to assure that only health care providers using the information for the purpose of treatment can utilize the network.

By design, it is only to be used to offer key information to medical professionals in the process of making treatment decisions. This is unique, nationally, in its specific design to only be used for purposes of treatment and other allowable uses by HIPAA. Authorized e-Health Network users can exchange files and messages securely, and access key Department of Health registries including domestic violence, immunizations and controlled substance databases. The state will soon add a master patient index (MPI) and record locator services (RLS) to the e-Health Network's application features.

The Office also administers Physician Connectivity Grants, providing up to \$3,500 per physician and \$2,500 per clinician, to help health care providers offset the costs of purchasing hardware, software and peripherals associated with connecting to e-health resources. To receive the grants, healthcare providers must agree to electronically prescribe (e-prescribe) for two years. To date, the Office has approved 1,830 health care providers and more than 420 treatment sites in Tennessee as grant recipients. The Office provides e-prescribing training and education programs to support its e-prescribing initiative among recipients and has trained more than 330 grant recipients as of April 2009. Tennessee has 2,238 active electronic prescribers, with 1,110 pharmacies in the state accepting prescriptions electronically. In 2008, Tennessee health care providers issued more than 2 million electronic prescriptions, representing three percent of all prescriptions written in the state.

TENNESSEE

Health Information Exchange (HIE): Tennessee has three successful HIEs. The *Mid-South eHealth Alliance* is a regional health information organization (RHIO) sharing clinical encounter data among 24 emergency departments and ambulatory clinics in the Memphis area. They have approximately 2.1 million records from 880,000 unique patients and add approximately 30,000 records daily.

Innovation Valley Health Information Network is a community-based, non-profit collaborative of local consumers, physicians, hospitals, employers, payers and other healthcare providers and provides a collaborative, consumer-centric health information network that provides consumers and their permitted caregivers real-time access to consumers' current and historic medical records.

CareSpark is a regional, community-based non-profit organization serving northeast Tennessee and southwest Virginia. CareSpark has developed a secure network that enables exchange of information for the purpose of patient care and treatment among physicians, hospitals, pharmacies, laboratories, imaging centers, public health departments and other facilities serving approximately 750,000 patients in the region.

The state has added 2 new HIEs, MiddleTN Connected, which is situated in the middle TN area and is comprised of 5 local hospitals, and West TN Healthcare, which is located in upper West TN and is comprised of hospitals and clinics.

In late 2006, Governor Bredesen was appointed to co-chair the NGA's new State Alliance for eHealth, organized to oversee consensus efforts to improve the nation's health care system through the effective and efficient use of health information technology. The Governor continues to hold this post as Co-Chair.

Last Updated: 03.25.2009

UTAH

Utah Health Information Network (UHIN)

Group Website: www.uhin.com

Governance: Board of Directors

Source of Authority: Non-profit

Source Document: www.uhin.com/about

State Government Involvement: The state Department of Health is a member of the Network.

State CIO Involvement: The CIO is a UHIN Board member.

Major Initiatives: UHIN, in operation since 1993, currently serves all the hospitals, ambulatory surgery centers, national laboratories and approximately 90% of the medical providers in Utah. UHIN participants have come together for the common goal of reducing health care administrative costs through data standardization of administrative health data and electronic commerce.

In 2008, the state of Utah passed legislation (<u>H.B. 47</u>) designating the Department of Health to establish standards for how clinical health information will be exchanged within the state. This standard will be used by everyone who exchanges this information in the state including UHIN.

In January of 2009, UHIN selected a vendor for its statewide health information exchange. Also beginning in 2009, the UHIN *Clinical Health Information Exchange* (cHIE) network will enable authorized clinicians – with patient permission - to securely electronically locate, connect to, and review patient information scattered across multiple health care organizations. This patient information may include previous medical events, diagnoses, tests, medications, and relevant documents. Clinicians do not need to have Electronic Medical Records (EMR) systems to make full use of the cHIE. The cHIE system offers the use of an "e-lite", which is a 'baseline' version of an EMR.

The organizations that participate in the cHIE network have agreed to make that information accessible to authorized clinicians by building secure electronic connections to the cHIE. The cHIE network will authenticate all authorized clinical users and provide privacy protections that comply with Federal and State regulations.

VERMONT

Vermont Information Technology Leaders (VITL)

Group Website: www.vitl.net

Governance: 11-member Board of Directors

Source of Authority: Non-profit, public-private partnership

Source Document: www.vitl.net/interior.php/pid/2

State Government Involvement: VITL is supported by state agencies and also receives funding for HIT research and development from the state budget. The VITL Advisory Board represents virtually every stakeholder in the healthcare arena in Vermont.

State CIO Involvement: The state CIO has served as a Director for VITL.

Major Initiatives: VITL is a multi-stakeholder corporation formed by a broad base of providers, payers, employers, patients, and state agencies. The efforts of VITL are being coordinated with other state and federal initiatives and VITL is partnering with hospitals, physician practices, and other health care organizations across the state of Vermont to implement IT projects to improve the quality and effectiveness of health care.

In January of 2009, VITL submitted its annual process report which highlighted that a pilot project of the Clinical Transformation Program was successfully launched in 2008 in assist 18 full-time Clinicians with EHR adoption and workflow redesign, ensuring that EHRs are deployed for maximum benefit in improving patient outcomes and efficiency. The development work accomplished during the pilot will enable VITL to ramp up its EHR implementation grant programs financed by the Health IT Fund in 2009.

Also in 2008, VITL launched its EHR Connectivity Service to enable hospitals to deliver electronic test results directly to physician EHRs. This service is critical for physicians implementing EHRs, and it lays the foundation for bi-directional health information exchange, which VITL expects to deploy in 2009.

VITL's staff and advisors also revised and updated the Vermont Health Information Technology Plan, firsts published in July 2007. This included a six-month process to solicit input from health care providers and consumers regarding development of privacy and security policies for the Vermont health information exchange network. A statistical snapshot of VITL's Progress is as follows:

- 1) Medication Histories Delivered: 85,000 from April 2007 to Jan. 2009
- 2) Blueprint Transactions: 795,000 to date
- 3) Lab Results Delivered: 53,000 from Sept. 2008 to Jan. 2009
- 4) Pilot Site EMRs: 82,000 Patient Visits a Year
- 5) Patient Demographics Registrations: 309,000 to date

Virginia Health Information Technology Council/ Governor's Office of Health IT

Group Website: www.hits.virginia.gov

Governance: The Council is co-chaired by Secretary of Technology and Secretary of Health and Human

Resources.

Source of Authority: Executive Order

Source Document: <u>www.hits.virginia.gov</u>

State Government Involvement: In 2006, Governor Kaine issued Executive Order 29 to continue the work of the Health Information Technology Council. Led by the Secretary of Technology and the Secretary of Health and Human Resources, stakeholders across the field of healthcare transformation and IT were brought together to further the mission of improving the cost and quality of care delivery in the Commonwealth. The Council undertook grant initiatives designed to provide public monies to private entities advancing the cause of health IT utilization. Executive Order 55 was issued in 2007 to extend the work of the Council in this endeavor.

State CIO Involvement: The state CIO is ex officio member of the Council.

Major Initiatives: Three "**Innovation Motivator**" organizations were chosen for grant awards based on their proposed health IT projects as well as their tenure and respect in the marketplace. During the second cycle of awards, two "**Pioneer in the Community**" organizations were chosen based on their emerging contribution to the health of their communities and their leadership position within their marketplace. During the past two years, intense planning, policy and program development has been undertaken by the Council and its grantee partners. The projects funded by the Council, and other health IT projects supported by the Council, will provide benefits not just to their own respective communities but to the Commonwealth as a whole.

State Funds	Organization	Federal Funds
\$250,000	MedVirginia	\$4.47M
\$250,000	CareSpark	\$4.15M
\$250,000	Community Care Network of Virginia	\$1.95M
\$150,000	NOVARHIO	\$0.30M
\$150,000	Centra Health	\$0.25M

The Commonwealth achieved 10-1 leverage on a \$1.1 Million investment.

Other projects include:

Virginia Health Exchange Network (VHEN): Through a collaboration with the Virginia Hospital and Healthcare Association, the Virginia Association of Health Plans, and the Governor's Office of Health IT; Virginia payers and providers came together with the goal of lowering transaction costs associated with verifying a patient's insurance eligibility. By procuring a common portal for Virginia providers to use when interacting with Virginia

VIRGINIA

payers, it allows a provider to retrieve up-to-date eligibility information from any participating Virginia health plan. A request for information was issued in the summer of 2008 with vendor selection completed in the fall of 2008. Implementation is currently underway.

The Council also endorses the Hampton Roads area's pilot project to link civilian and military/VA health systems. These potential initiatives will leverage CCD reporting through the use of Personal Health Record (PHR) systems. There is a need for pediatric consultations between Portsmouth Naval Hospital, Virginia's largest birthing facility, and other civilian providers. Additional "value cases" will be developed as opportunities arise.

Virginia is the only state with two participants (MedVirginia and CareSpark) in the Nationwide Health Information Network Trial Implementation. These two organizations successfully demonstrated interoperability to a national audience at the September 24, 2008 meeting of the American Health Information Community. In addition, Virginia was one of twelve communities in the United States selected for participation in the Centers for Medicare and Medicaid Services (CMS) Electronic Health Records Demonstration. CMS is providing up to \$30M in funding to support physician electronic health record adoption.

Virginia has strong representation on national standards development workgroups such as the Health Information Security and Privacy Collaborative. Also, the Commonwealth has been designated as a Chartered Value Exchange (CVE). The CVEs represent one of several initiatives undertaken by Health and Human Services (HHS) to implement a vision for health care reform built on four cornerstones including adopting interoperable health information technology.

WASHINGTON

Washington State Health Care Authority (HCA) and the Health Information Infrastructure Advisory Board (HIIAB)

Group Website: www.hca.wa.gov/hit/hiiab.html

Governance: 12-member Board, plus the executive sponsor and one ex-officio member

Source of Authority: Legislation

Source Document: http://apps.leg.wa.gov/billinfo/summary.aspx?bill=5064&year=2005

http://apps.leg.wa.gov/billinfo/summary.aspx?bill=5930&year=2007

State Government Involvement: The HIIAB is supported by policy staff from the Washington State Health-Care Authority (HCA). Representatives of the health care community, consumers and the state CIO are members. The Washington State budget includes funds to support a group of health information initiatives.

State CIO Involvement: The state CIO is an ex-officio member of the HIIAB and, in conjunction with the state budget office, has been authorized to approve the expenditure of funds designated for certain health information projects designated in the 2007-09 Operating Budget.

Major Initiatives: HCA and HIIAB, created by SSB 5064, developed a strategy for the adoption and use of electronic medical records and health information technologies that are consistent with emerging national standards and promote interoperability of health information systems. During the 2007 session, the Washington State Legislature passed a bill which authorizes the HCA to establish an Advisory Board, which may consist of HIIAB members, to assist with the design and pilot of a consumer-centric health information infrastructure.

HCA and HIIAB submitted the required final report with findings and recommendations in December of 2006. The report calls for the phased implementation of a competitive health record banking model. The state budget for the 2007-09 Biennium includes funds to support the following health information projects.

Health Record Banks – Based upon the HIIAB report, complete the design of a consumer-centric health information infrastructure and health record banks—three health records banks were launched in Washington State; see the press release at: www.hca.wa.gov/hit/press/online-health-record-projects.html.

Health Information Tech Grants – Provide grants to health care providers to purchase health information technology—three pilot projects received grants totaling \$1.7 Million to Test Consumer Managed Health Record Banks: see press release at: www.hca.wa.gov/hit/documents/AMHAugust202008GrantVersFinal.pdf.

Eastern State Hospital – Connect Eastern State Hospital to an integrated hospital information system to improve operations and interactions with community clinics—the system was implemented in 2008 with the final report due July 2009.

Critical Patient Info Initiative – Implement a pilot project to evaluate the use of a medical response health record system by emergency medical personnel in King, Snohomish, Thurston, and Whatcom Counties—cancelled due to economic constraints.

WASHINGTON

Medical Records Technology Gap – Evaluate the information technology infrastructure of institutions operated by the Departments of Social and Health Services, Veterans Affairs, and Corrections and prepare a strategy for the use electronic medical records at these facilities—completed.

WEST VIRGINIA

West Virginia Health Information Network (WVHIN) Board

Group Website: www.WVhin.org

Governance: 17-member Board of Directors

Source of Authority: Legislation

Source Document: www.legis.state.wv.us/Bill Text HTML/2006 SESSIONS/RS/BILLS/SB170

State Government Involvement: State Government sponsors the HIE as a state agency. A number of members of the board of directors come from state government, including the Director of the Public Employees Insurance Agency, the Chief Technology Officer of the Office of Technology, Secretary of Health and Human Resources, Chair of the Health Care Authority and President of the Board of Pharmacy. The state's Chief Privacy Officer was appointed as the Executive Director in 2007.

State CIO Involvement: The state CIO is a member of the Board

Major Initiatives: This public/private collaborative Board is composed of provider, payer, state government, higher education and consumer representatives and is tasked with transforming the state's paper-based health care industry into a streamlined, statewide network of electronic medical records. To date, the Board has:

- Assisted Governor's office to pass legislation which authorized electronic prescribing in the state.
- Established a Technology Committee chaired by the CIO to evaluate HIT systems, business models, and sustainability in preparation for issuing an RFP for implementation of a statewide Health Information Exchange.
- Drafted an RFP and a business plan, both pending Board approval.
- Participating in the continuation of the HISPC project and a parallel consumer engagement and education project.
- Continuing as a prime contractor for the NHIN2 Trial Implementation.
- Participating with the WV Telehealth Alliance to apply for FCC Rural Health Pilot project and promotion of telehealth capabilities and infrastructure.
- Assisted with an application for a CAH FLEX HIT grant.
- Coordinating HIT planning activities with the state Medicaid's \$13.8 million Medicaid Transformation Grant awards.
- Working in coordination with the state Office of Technology and the Office of the Governor to support the Governor's initiative to provide broadband access for the entire state by 2010.
- Coordinating with multiple, ongoing HIT education and implementation projects around the state including the installation of the VA's VistA software in state operated hospitals and the Legislature's Roadmap to Health Project.

WEST VIRGINIA

Other major initiatives with involvement from the state of West Virginia regarding statewide health IT include:

West Virginia Telehealth Alliance, Inc. (WVTA)

Group Website: www.wvtelehealth.org

Governance: 9-member Board of Directors

Source of Authority: Non-Profit Organization

Source Document: www.wvtelehealth.org

State Government Involvement: The Health Care Authority of West Virginia has provided \$550,000 in funds to assist with the funding needs associated with the alliance's participation in the FCC's Rural Health Care Pilot Project (see below). Also, it is anticipated that additional state funding for this project will be provided by the W.Va. Department of Health and Human Resources.

State CIO Involvement: The state's Chief Technology Officer is among the nine members of the alliance's board of directors.

Major Initiatives: The goal of the WVTA is to advance telehealth use and telemedicine capabilities throughout the Mountain State and to improve healthcare. Participants in the alliance include hospitals, rural healthcare centers, medical schools (WVU, Marshall, CAMC, WV School of Osteopathic Medicine), physicians, mental health centers, local health departments, senior groups, consumers as well as AFL-CIO and the West Virginia Chamber of Commerce as well as major telecommunications companies. A list of participants is found on the alliance's web site: www.wvtelehealth.org/Network/Participants/tabid/101/Default.aspx. Objectives include:

- Develop a statewide telehealth network infrastructure to enhance healthcare delivery with priority emphasis is placed on rural medically underserved regions using telehealth/telemedicine technologies
- Help rural locations have increased access to healthcare and supporting services while containing or decreasing healthcare costs
- Aiding in the dissemination of relevant information, training and technical assistance to healthcare organizations and providers to assist them with the adoption, deployment and utilization of new and emerging telehealth technologies for patient treatment and care coordination
- Increase the use of distance learning in publish health and medical care
- Help to spur the use of electronic medical records
- Facilitate access to training for healthcare workers, medical professional and patient education in rural and medically underserved areas

The West Virginia Telehealth Alliance is one of 69 organizations across the U.S. that has been selected to participate in the FCC's Rural Health Care Pilot Program. As such, the WVTA will have approximately \$9.7 million in state and federal funds to improve broadband connectivity among eligible health care entities in the state. Click here to learn more about the FCC's pilot program.

WEST VIRGINIA

West Virginia Roadmap to Health Project

Group Website: http://healthcarereform.wvlegislature.gov/charter_chronic_care.cfm

Governance: WV Legislature's Interim Select Committee D on Health

Source of Authority: Legislation

Source Document: http://healthcarereform.wvlegislature.gov

State Government Involvement: On May 19, 2008, the West Virginia Legislature called for all those engaged in healthcare to take a major step in addressing the monumental challenge of reform. Recognizing that a number of healthcare reform efforts were in progress and that a shared approach was needed, Senator Prezioso and Delegate Perdue (respective leaders of the Senate and House of Delegates committees on health) and Select Committee D on Health launched the "The Roadmap to Health Project." Those involved in the project will focus on how to build a state-of-the-art, preventative healthcare delivery system in West Virginia. This project will inventory, organize and build upon the quality initiatives already in progress here in West Virginia. This process will focus on developing the model that meet the needs of the citizens of West Virginia and will then focus on how to pay for it.

State CIO Involvement: Advisory Role

Major Initiatives: This workgroup is to recommend new payment models for supporting the development of a patient centered medical home (health home) with strategies to promote quality healthcare as well as other strategies to manage primary healthcare delivery, developing community level implementation strategies for the provider models (FQHC, family practice doctors, nurses or others) that provide timely care for those with health needs.

- Develop a common vision of what your workgroup intends to work toward
- The Health System Redesign Workgroup is researching various chronic care models around the country to develop a medial model of c are that would be available to all West Virginians and would ensure primary and preventative care for all, a starting point for reform of the entire system
- The Administrative Simplification Workgroup is looking at provider credentialing; consumer-friendly hospital and physician statements; and the explanation of benefits, member identification cards and prior authorization requirements of payors
- The Chronic Care Management/Health Information Technology Workgroup is focusing on three primary areas: incentives to drive electronic medical records implementation in small clinics and offices; use of best electronic medical records practices; and creation of a system to provide ongoing support for electronic record usage through training and other education programs
- The Wellness and Health Promotion Workgroup has zeroed in on substance abuse; safety issues, immunizations; nutrition; and physical activity/physical education

WISCONSIN

Wisconsin Health Information Exchange

Group Website: www.whie.org

Governance: Board of Directors

Source of Authority: Non-profit

Source Document: www.wisgov.state.wi.us

State Government Involvement: The Department of Health Services is involved in this initiative.

State CIO Involvement: NASCIO staff could not detect state CIO involvement

Major Initiatives: WHIE was formed to improve the quality, safety efficiency and accessibility of health care and public health by enabling collaboration and information sharing across multiple health care facilities. The WHIE ED Linking Project is being pursued in collaboration with the Milwaukee Health Care Partnership, WI Department of Health Services, and participating health care providers across the greater Milwaukee area. WHIE's technical business partner is Microsoft Health Solutions Group, with WHIE powered by Amalga.

After establishing its initial membership and pursuing pilot studies in 2005 and 2006, WHIE launched the ED Linking Project in 2007, with clinical use beginning in 2008. As of December 2008, WHIE had 13 hospitals across four delivery networks contributing data to the exchange, and five emergency departments using the exchange in regular patient care. In 2009, WHIE plans to expand the types of data (e.g. lab results, pharmacy information, imaging results) available to participants and also plans to expand the number of participating organizations.

The WHIE system is supported by federal directives to establish an interoperable national health information infrastructure. Southeast Wisconsin was one of nine recipients of funding from the national Connecting Communities for Better Health program to develop production systems and establish best practices that can then be shared across the state and country.*

Recent WHIE accomplishments include: network integration work with the Wisconsin Health Alert Network, Wisconsin Immunization Registry and EMSystem; applications to various potential funding partners in collaboration with other RHIOs across the country; and business plan development. WHIE projects planned for 2009 include implementation of a regional patient record location service, a data exchange system to support emergency care, feasibility testing of electronic results routing between hospitals, outpatient settings and public health, and planning for a regional medication registry.

As of November 2008, 13 hospitals contributing data to WHIE.

WYOMING

Wyoming Health Information Organization (WyHIO)

Group Website: www.wyhio.org

Governance: 13-member Board of Directors

Source of Authority: Non-profit

Source Document: http://www.wyhio.org/11.html

State Government Involvement: Representatives from state government sit on the Board.

State CIO Involvement: The state CIO serves as liaison to state government.

Major Initiatives: WyHIO has been active in the following areas:

WHCC Contract

In October 2007, the WyHIO completed a survey for the Wyoming Healthcare Commission (WHCC) to provide information on existing healthcare information technology capability in Wyoming's medical community, specific software in use, access to high speed internet connections in Wyoming, and the ability to exchange electronic healthcare information among providers in Wyoming. The WyHIO contracted with the Wyoming Survey and Analysis Center at the University of Wyoming to conduct the survey, which began in early 2007. The cooperation of key stakeholders in the healthcare community was essential to help the WyHIO and the WHCC gauge the readiness of the Wyoming healthcare community to engage in healthcare information exchange. View the report.

Additionally, the WHCC has approved an amendment to the contract for a Healthcare Information Exchange (HIE) needs assessment survey focusing on the types of information providers consider to be the most valuable in an HIE, barriers and difficulties experienced in implementing an exchange and the specific reasons for not participating. The data collected in this step will provide the type of information and specific exchange projects that would be of most value to providers, assistance required to increase participation in HIE, and where the assistance is needed the most.

Federal Communications Commission Grant Application

Wyoming was recently awarded an FCC grant to tie health care providers together is a dedicated communications network. The WyHIO participated with 12 other organizations to apply for that grant. The pilot program will provide for the construction of state or regional broadband networks and services provided over those networks. The networks will be designed to bring the benefits of innovative telehealth and telemedicine services to those areas where the need is most acute. For additional information on the application, see www.health.uwyo.edu/fcc.

The WHCC is supporting the WyHIO is this effort with funding for project management activities in the design and implementation of the communications network. Under this agreement, the WyHIO will ensure the network is expandable to meet the long term needs of the healthcare community, and help address security issues in the network.

To check progress on this project, see the Wyoming Health Information Resources website, Under the Statewide Telehealth/Telemedicine Network. www.wyhir.org/Browse.aspx?S=4&F=45

WYOMING

Additionally, Wyoming has formed a Statewide Telehealth Steering Committee to guide network implementation and growth. That Committee has developed a DRAFT plan for network development, which emphasizes education and administrative services in the initial year of network implementation, and clinical services in subsequent years. View the report.

Health Information Privacy and Security Project

Wyoming was one of 34 states and territories awarded in 2006 a subcontract with the U.S. Department of Health and Human Services Agency for Healthcare Research and Quality through RTI International, Inc. (RTI) to create a Health Information Security and Privacy Collaboration (HISPC) group that would address privacy and security policy questions affecting the interoperable exchange of electronic health information among the numerous organizations that make up the health care community. A partnership between the WyHIO and the University of Wyoming Center for Rural Health Research and Education (CRHRE) was created to accomplish the goals of the HISPC.

Following completion of the project, Wyoming requested, and was awarded a follow-on grant to create an online privacy/security resource center for Wyoming. This center, named Wyoming's Health Information Resource (WYHIR), is now available, and provides resources to help coordinate research and education to address barriers to health information exchange identified over the course of the original study. This site provides HIPAA and other security/privacy training, telehealth/telemedicine network information, electronic prescribing information, general information, and links to other educational opportunities.

To access the site, visit www.wyhir.org

Health Information Exchange Roadmap

The WyHIO is now developing a Roadmap for the design and implementation of a statewide HIT/HIE network, based on recommendations in the recent WHCC and WyHIO reports and consensus developed at the HIT/HIE Conference. The purpose of this statewide HIT/HIE effort is to give providers the ability to gather and exchange electronic healthcare information as one means to improve the cost, quality, access to, and safety of healthcare. Your review and comment on the first version of the Roadmap will be appreciated. View the Roadmap.
